## Data element attributes

### Collection and usage attributes

<b>Guide for use:</b>	<p>Assessment measures are clinical outcome measures appropriate for use when objectively measuring a person's health or health related circumstance.</p> <p>The measure may or may not be standardised; and may be profession specific, or shared amongst a number of professions.</p> <p>Profession specific code sets can be used for the allied health service provider to choose from.</p> <p>This data element is used in the <a href="#">Allied health assessment cluster</a>.</p> <p>In the absence of nationally consistent code sets or values for recording assessment measure name 'free text' is to be used. Assessment measures may be recorded for all <a href="#">allied health service events</a>.</p> <p>A combination of assessment types, measures and results fields represent a discrete assessment. Each allied health service event may have one or more assessment types, measures and results recorded, up to a maximum of 99.</p> <p>Examples of Allied health service event – assessment measure results may include, but are not limited to:</p> <p>True/False</p> <p>Positive/ Negative</p> <p>Positive numerical value i.e. 3 or negative numerical value i.e. -7</p>
<b>Collection methods:</b>	Each jurisdiction will implement a locally agreed code set for collection of the data element. This may be borrowed or adapted from another jurisdiction.
<b>Comments:</b>	Subsequent analysis of locally agreed values will contribute to developing national standardised values in the future.
