Australian Health Performance Framework: PI 2.1.1– Immunisation rates for vaccines in the national schedule, 2019

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Common name:	AHPF PI 2.1.1–Immunisation rates for vaccines in the national schedule, 2019
Short name:	AHPF PI 2.1.1–Immunisation rates for vaccines in the national schedule, 2019
METEOR identifier:	715012
Registration status:	Health , Superseded 01/12/2020
Description:	The proportion of 1-, 2- and 5-year-olds who have been assessed as fully immunised according to information recorded in the Australian Immunisation Register.
Rationale:	Immunisation is highly effective in reducing morbidity and mortality caused by vaccine-preventable diseases such as measles, meningococcal disease and poliomyelitis. Vaccinations are an effective strategy for reducing disease disparities between population groups.
Indicator set:	Australian Health Performance Framework, 2019 Health , Superseded 13/10/2021 Australian Health Performance Framework, 2019 Health , Superseded 13/10/2021

Collection and usage attributes

Computation description:	The proportion of 1-, 2- and 5-year-olds who are fully immunised according to the National Immunisation Program Schedule.
Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$ Calculated separately for 1-, 2- and 5-year-old children.

Numerator: 1-, 2-, and 5-year old children who are fully vaccinated according to the National Immunisation Program Schedule.

Fully vaccinated 1 year olds are children aged 12-15 months who, prior to the age of 12 months were vaccinated against:

- diphtheria
- tetanus
- pertussis (whooping cough)
- poliomyelitis
- hepatitis B
- *Haemophilus influenzae* type b
- (from the quarter ended 31 December 2013) pneumococcal disease.

Fully vaccinated 2 year olds are children aged 24-27 months who were vaccinated against:

- diphtheria
- tetanus
- pertussis (whooping cough)
- poliomyelitis
- hepatitis B
- *Haemophilus influenzae* type b
- measles, mumps and rubella
- (from the quarter ending 31 December 2014) meningococcal C, measles, mumps, rubella and varicella (chickenpox).

Fully vaccinated 5 year olds are children aged 60-63 months who were vaccinated against:

- diphtheria
- tetanus
- pertussis (whooping cough)
- poliomyelitis
- (until the quarter ending 30 September 2017) measles, mumps and rubella.

Numerator data elements:

Data Element / Data Set

Data Element

Number of 1-, 2- and 5- year old children fully vaccinated according to the National Immunisation Program scheme.

Data Source

[Australian Immunisation Register \(AIR\)](#)

Guide for use

Data source type: Register

Denominator:

Number of 1-, 2- and 5- year old children registered on the Australian Immunisation Register.

Denominator data elements:

Data Element / Data Set

Data Element

Number of children who turned 1, 2 or 5 years between 1 April and 31 March registered with Medicare on the National Immunisation Register

Data Source

[Australian Immunisation Register \(AIR\)](#)

Guide for use

Data source type: Register

Disaggregation:

2012–13 to 2018–19—Nationally, by:

- Indigenous status.

2012–13 to 2018–19—State and territory, by:

- Indigenous status.

2012–13 to 2018–19—Primary Health Network (PHN), by:

- Indigenous status.

Some disaggregation may result in numbers too small for publication.

Disaggregation data elements:**Data Element / Data Set****Data Element**

Indigenous children who turned 1, 2 or 5 years between 1 April and 31 March registered with Medicare on the National Immunisation Register

Accountability attributes

Methodology:	<p>A full description of the methodology used can be found in <i>Methodology for measuring Australia's childhood immunisation coverage</i> (O'Brien et al. 1998).</p> <p>For each age it is assumed that earlier vaccinations in the series have been given.</p> <p>A change in the definition of fully immunised for 2 year olds occurred from the quarter ending 31 December 2014 when meningococcal C vaccination (given at 12 months), dose 2 measles, mumps, rubella (MMR), and dose 1 varicella vaccination were included in the definition of 'fully immunised'. A second change for this age group occurred from the quarter ending 31 March 2017 when dose 4 diphtheria, tetanus, pertussis (DTP) was included in the definition of 'fully immunised'. The inclusion of these additional vaccines caused decreases in the reported immunisation coverage rates at 2 years of age.</p>
