National Healthcare Agreement: PB f–By 2014–15, improve the provision of primary care and reduce the proportion of potentially preventable hospital admissions by 7.6 per cent over the 2006-07 baseline to 8.5 per cent of total hospital admissions, 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PB f–By 2014–15, improve the provision of primary care and reduce the proportion of potentially preventable hospital admissions by 7.6 per cent over the 2006–07 baseline to 8.5 per cent of total hospital admissions, 2020
METEOR identifier:	716265
Registration status:	Health , Standard 13/03/2020
Description:	By 2014–15, improve the provision of primary care and reduce the proportion of potentially preventable hospital admissions by 7.6 per cent over the 2006–07 baseline to 8.5 per cent of total hospital admissions (Baseline specification). There are two parts to this performance benchmark: 1. Improved provision of primary care 2. Reduced potentially preventable hospital admissions For Part 1, the measure is under development. For Part 2, the measure is defined below.
Indicator set:	National Healthcare Agreement (2020) Health , Standard 13/03/2020
Outcome area:	Primary and Community Health Health , Standard 07/07/2010

Collection and usage attributes

Computation description:	For ICD-10-AM coding details, please refer to the specification for National Healthcare Agreement Performance Indicator 18–Selected potentially preventable hospitalisations, 2020. Analysis of state/territory is based on usual residence of the person. Presented as a number and a percentage.
Computation:	Number $100 \times (\text{Numerator} \div \text{Denominator})$

Numerator: Number of potentially preventable hospitalisations, divided into three groups and total:

- vaccine-preventable (e.g. tetanus, measles, mumps, rubella)
- acute conditions (e.g. ear, nose and throat infections, perforated/bleeding ulcer, pelvic inflammatory disease)
- chronic conditions (e.g. diabetes complications, asthma, angina, hypertension, congestive heart failure and chronic obstructive pulmonary disease)
- all potentially preventable hospitalisations.

Numerator data elements:

Comments:

Most recent data available for 2020 National Healthcare Agreement performance reporting: 2017–18.

Baseline: 2006–07.

The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.

Representational attributes

Representation class: Rate
Data type: Real
Unit of measure: Episode

Accountability attributes

Reporting requirements: National Healthcare Agreement

Organisation responsible for providing data: Australian Institute of Health and Welfare

Benchmark: National Healthcare Agreement Performance Benchmark:

By 2014–15, improve the provision of primary care and reduce the proportion of potentially preventable hospital admissions by 7.6% over the 2006–07 baseline to 8.5% of total hospital admissions.

Refer: http://www.federalfinancialrelations.gov.au/content/npa/health/_archive/healthcare_national-agreement.pdf.

Further data development / collection required: Specification: Minor work required, the measure needs minor work to meet the intention of the indicator.
