Product of birth—primary cause of neonatal death, PSANZ neonatal death classification code [N]N.N[NN]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	PSANZ neonatal death code
Synonymous names:	PSANZ-NDC code
METEOR identifier:	716435
Registration status:	Health , Standard 07/02/2023
Definition:	The single most important factor in the neonatal period which caused a death, as represented by a PSANZ neonatal death code.
Data Element Concept:	Product of birth—primary cause of neonatal death
Value Domain:	PSANZ Neonatal Death Classification code [N]N.N[NN]

Value domain attributes

Representational attributes

Classification scheme:	Perinatal Society of Australia and New Zealand Neonatal Death Classification, Third revision
Representation class:	Code
Data type:	String
Format:	[N]N.N[NN]
Maximum character length:	5

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use:	<p>This element is only to be collected for neonatal deaths (i.e. where Product of birth—perinatal death type, code N is recorded as CODE 2 (Neonatal death.)) This is in addition to the element Product of birth—primary cause of perinatal death, PSANZ Perinatal Death Classification code [N]N.N[NNN], which is to be collected for all deaths that occur in the perinatal period.</p> <p>The purpose of the PSANZ Neonatal Death Classification (PSANZ-NDC) is, in addition to the PSANZ-PDC, to identify the single most important factor in the neonatal period which caused the death.</p>
