

# Indigenous primary health care: PI02a-Number of Indigenous babies born within the previous 12 months whose birthweight results were low, normal or high, June 2020

## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Output measure
<b>Short name:</b>	PI02a-Number of Indigenous babies born within the previous 12 months whose birthweight results were low, normal or high, 2020–2021
<b>METEOR identifier:</b>	717269
<b>Registration status:</b>	<ul style="list-style-type: none"><li>• <a href="#">Health</a>, Retired 13/10/2021</li><li>• <a href="#">Indigenous</a>, Superseded 14/07/2021</li></ul>

<b>Description:</b>	Number of Indigenous babies born within the previous 12 months whose birthweight results were categorised as one of the following: <ul style="list-style-type: none"><li>• Low (less than 2,500 grams)</li><li>• Normal (2,500 grams to less than 4,500 grams)</li><li>• High (4,500 grams and over).</li></ul>
---------------------	---

<b>Rationale:</b>	Low birthweight (newborn babies weighing less than 2,500 grams) is associated with an increased risk of ill health and is related to higher mortality within the first year of life. Low birthweight is a particular issue for Indigenous Australians. Recording birthweight encourages the provision of appropriate care to limit the negative associations of low birthweight.

-----------------------	--

## Collection and usage attributes

<b>Computation description:</b>	Count of Indigenous babies born within the previous 12 months whose birthweight results were categorised as one of the following: <ul style="list-style-type: none"><li>• Low (less than 2,500 grams)</li><li>• Normal (2,500 grams to less than 4,500 grams)</li><li>• High (4,500 grams and over).</li></ul> <p>Birthweight is defined as the first weight of a baby obtained after birth.</p> <p>Presented as a number.</p> <p>Calculated separately for each weight range.</p> <p>Excludes multiple births and stillbirths. Births that are at least 20 weeks gestation or at least 400 grams birthweight are included.</p> <p>Excludes unknown birthweight and unknown gestational age.</p> <p>'Previous 12 months' refers to the previous financial year or previous calendar year.</p>
<b>Computation:</b>	Numerator only.

**Numerator:**

Calculation A: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as low (less than 2,500 grams).

Calculation B: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as normal (2,500 grams to less than 4,500 grams).

Calculation C: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care service with a result categorised as high (4,500 grams and over).
