# Indigenous primary health care: Pl05b-Proportion of regular clients with Type II diabetes who have had an HbA1c measurement result recorded, June 2020

# Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

**Short name:** Pl05b-Proportion of regular clients with Type II diabetes who have had an HbA1c

measurement result recorded, 2020-2021

METEOR identifier: 717285

**Registration status:** Health, Retired 13/10/2021

Indigenous, Superseded 14/07/2021

**Description:** Proportion of regular clients who are Indigenous, have Type II diabetes and who

have had an HbA1c measurement result recorded at the primary health-care service within the previous 6 months AND proportion of regular clients who are Indigenous, have Type II diabetes and who have had an HbA1c measurement result

recorded at the primary health-care service within the previous 12 months.

Rationale: People with diabetes should have their glycosylated haemoglobin (HbA1c)

measured at least every 6 months or more frequently depending on the level of blood glucose control. Effective management of chronic disease can delay the progression of disease, improve quality of life, increase life expectancy, and

decrease the need for high-cost interventions.

Indigenous primary health care key performance indicators June 2020

Health, Retired 13/10/2021

Indigenous, Superseded 14/07/2021

# Collection and usage attributes

**Computation description:** Proportion of regular clients who are Indigenous, have Type II diabetes and who

have had an HbA1c measurement result recorded at the primary health-care service within the previous 6 months AND proportion of regular clients who are Indigenous, have Type II diabetes and who have had an HbA1c measurement result

recorded at the primary health-care service within the previous 12 months.

'Regular client' refers to a client of an Australian Government Department of Healthfunded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health-

care service at least 3 times in 2 years.

Exclude Type I diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, impaired glucose tolerance.

Results arising from measurements conducted outside of the service, that are

known by the service, are included in the calculation of this indicator.

Presented as a percentage.

Calculated separately for 6 months and 12 months.

**Computation:** (Numerator ÷ Denominator) x 100

Numerator: Calculation A: Number of regular clients who are Indigenous, have Type II diabetes

and who have had an HbA1c measurement result recorded at the primary health-

care service within the previous 6 months.

Calculation B: Number of regular clients who are Indigenous, have Type II diabetes and who have had an HbA1c measurement result recorded at the primary health-

care service within the previous 12 months.

#### Numerator data elements:

Data Element / Data Set

Person—diabetes mellitus status, code NN

Comments:

This indicator covers a 24 month reporting period from 1 January 2020 to 31 December 2021:

- Indigenous primary health care NBEDS 2019–20 covers the period 01/01/2020 to 30/06/2020
- Indigenous primary health care NBEDS 2020–21 covers the period 01/07/2020 to 30/06/2021
- Indigenous primary health care NBEDS 2021–22 (to be released) will cover the period 01/07/2021 to 31/12/2021.
