Indigenous primary health care: Pl09a-Number of regular clients whose smoking status has been recorded, June 2020

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: Pl09a-Number of regular clients whose smoking status has been recorded, 2020–

2021

METEOR identifier: 717300

Registration status: Health, Retired 13/10/2021

Indigenous, Superseded 14/07/2021

Description: Number of regular clients who are Indigenous, aged 15 and over and whose

smoking status has been recorded at the primary health-care service within the

previous 24 months.

Rationale: Smoking has been identified as one of the key risk factors contributing to the

burden of disease for Indigenous Australians. It is important that Indigenous primary

health-care services know the smoking status of clients in order to provide

appropriate medical care.

Indigenous primary health care key performance indicators June 2020

Health, Retired 13/10/2021

Indigenous, Superseded 14/07/2021

Collection and usage attributes

Population group age

from:

15 years

Computation description: Count of regular clients who are Indigenous, aged 15 and over and whose smoking

status has been recorded within the previous 24 months at the primary health-care

service.

'Regular client' refers to a client of an Australian Government Department of Healthfunded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health-

care service at least 3 times in 2 years.

Results arising from measurements conducted outside of the service, that are

known by the service, are included in the calculation of this indicator.

Operationalisation of smoking status:

Where an Indigenous regular client's tobacco smoking status does not have an assessment date assigned within the Patient Information Record System (PIRS), smoking status as recorded in the PIRS should be treated as current (i.e. as having

been updated within the previous 24 months).

Presented as a number.

Computation: Numerator only.

Numerator: Number of regular clients who are Indigenous, aged 15 and over and whose

smoking status has been recorded within the previous 24 months at the primary

health-care service.
