

Indigenous primary health care: PI14b-Proportion of regular clients aged 50 years and over who are immunised against influenza, June 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI14b-Proportion of regular clients aged 50 years or more who are immunised against influenza, 2020–2021
METEOR identifier:	717322
Registration status:	<ul style="list-style-type: none">• Health, Retired 13/10/2021• Indigenous, Superseded 14/07/2021
Description:	Proportion of regular clients who are Indigenous, aged 50 and over and who are immunised against influenza.
Rationale:	Influenza remains a major cause of illness and death among Indigenous adults. Vaccination has been demonstrated to reduce deaths.
Indicator set:	Indigenous primary health care key performance indicators June 2020 Health , Retired 13/10/2021 Indigenous , Superseded 14/07/2021

Collection and usage attributes

Population group age from:	50 years
Computation description:	<p>Proportion of regular clients who are Indigenous, aged 50 and over and who are immunised against influenza.</p> <p>'Regular client' refers to a client of an Australian Government Department of Health-funded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health-care service at least 3 times in 2 years.</p> <p>For Indigenous people aged 50 and over, the <i>Australian Immunisation Handbook</i> (DoH 2017) recommends immunisation against influenza. An Indigenous person aged 50 and over is immunised against influenza if they have received an influenza vaccine within the previous year.</p> <p>Presented as a percentage.</p>
Computation:	$(\text{Numerator} \div \text{Denominator}) \times 100$
Numerator:	Number of regular clients who are Indigenous, aged 50 and over and who are immunised against influenza.
