## Indigenous primary health care: PI19b-Proportion of regular clients with a selected chronic disease who have had a kidney function test with results within specified levels, June 2020

## Identifying and definitional attributes

Metadata item type:	Indicator	
Indicator type:	Indicator	
Short name:	PI19b-Proportion of regular clients with a selected chronic disease who have had a kidney function test with results within specified levels, 2020–2021	
METEOR identifier:	717344	
Registration status:	<u>Health</u> , Retired 13/10/2021 <u>Indigenous</u> , Superseded 14/07/2021	
Description:	Proportion of regular clients who are Indigenous, aged 15 and over, who are recorded as having Type II diabetes or cardiovascular disease (CVD) and who have had an estimated glomerular filtration rate (eGFR) recorded within the previous 12 months with a result of (ml/min/1.73m <sup>2</sup> ):	
	<ul> <li>greater than or equal to 90;</li> <li>greater than or equal to 60 but less than 90;</li> <li>greater than or equal to 45 but less than 60;</li> <li>greater than or equal to 30 but less than 45;</li> <li>greater than or equal to 15 but less than 30 or;</li> <li>less than 15</li> </ul>	
	OR the proportion of regular clients who are male, Indigenous, aged 15 and over, who are recorded as having Type II diabetes and who have had an albumin/creatinine ratio (ACR) recorded within the previous 12 months with a result of (mg/mmol):	
	<ul> <li>less than 2.5</li> <li>greater than or equal to 2.5 but less than or equal to 25</li> <li>greater than 25</li> </ul>	
	OR the proportion of regular clients who are female, Indigenous, aged 15 and over, who are recorded as having Type II diabetes and who have had an albumin/creatinine ratio (ACR) recorded within the previous 12 months with a result of (mg/mmol):	
	<ul> <li>less than 3.5</li> <li>greater than or equal to 3.5 but less than or equal to 35</li> <li>greater than 35</li> </ul>	
Rationale:	Indigenous Australians have very high levels of kidney disease due to a range of risk factors and antecedents. Kidney disease contributes substantially to the high burden of ill health experienced by Indigenous Australians. Tests of a person's urine and blood can identify most cases of chronic kidney disease when the disease is in its early stages, enabling treatment to prevent or slow down the progression. Glomerular filtration and albumin/creatinine ratio rate are accepted as the best measures of kidney disease.	
Indicator set:	Indigenous primary health care key performance indicators June 2020 Health, Retired 13/10/2021 Indigenous, Superseded 14/07/2021	

## Collection and usage attributes

nom.	
Computation description:	<ul> <li>Proportion of regular clients who are Indigenous, aged 15 and over, who are recorded as having Type II diabetes or CVD and who have had an eGFR recorded within the previous 12 months with a result of (ml/min/1.73m<sup>2</sup>):</li> <li>greater than or equal to 90;</li> <li>greater than or equal to 60 but less than 90;</li> <li>greater than or equal to 45 but less than 60;</li> <li>greater than or equal to 30 but less than 45;</li> <li>greater than or equal to 15 but less than 30 or;</li> <li>less than 15</li> </ul>
	OR the proportion of regular clients who are male, Indigenous, aged 15 and over, who are recorded as having Type II diabetes and who have had an albumin/creatinine ratio (ACR) recorded within the previous 12 months with a result of (mg/mmol):
	<ul> <li>less than 2.5</li> <li>greater than or equal to 2.5 but less than or equal to 25</li> <li>greater than 25</li> </ul>
	OR the proportion of regular clients who are female, Indigenous, aged 15 and over, who are recorded as having Type II diabetes and who have had an albumin/creatinine ratio (ACR) recorded within the previous 12 months with a result of (mg/mmol):
	<ul> <li>less than 3.5</li> <li>greater than or equal to 3.5 but less than or equal to 35</li> <li>greater than 35</li> </ul>
	'Regular client' refers to a client of an Australian Government Department of Health- funded primary health-care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the Department of Health-funded primary health- care service at least 3 times in 2 years.
	Presented as a percentage.
Computation:	(Numerator ÷ Denominator) x 100
Numerator:	Calculation A: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 90.
	Calculation B: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 60 but less than 90.
	Calculation C: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 45 but less than 60.
	Calculation D: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who had an eGFR recorded within the previous 12 months with a result of greater than or equal to 30 but less than 45.
	Calculation E: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who had an eGFR recorded within the previous 12 months with a result of greater than or equal to 15 but less than 30.
	Calculation F: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an eGFR recorded within the previous 12 months with a result of less than 15.
	Calculation G: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having CVD and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 90.

Calculation H: Number of regular clients who are Indigenous, aged 15 and over, are

recorded as having CVD and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 60 but less than 90.

Calculation I: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having CVD and who have had an eGFR recorded within the previous 12 months with a result of greater than or equal to 45 but less than 60.

Calculation J: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having CVD and who had an eGFR recorded within the previous 12 months with a result of greater than or equal to 30 but less than 45.

Calculation K: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having CVD and who had an eGFR recorded within the previous 12 months with a result of greater than or equal to 15 but less than 30.

Calculation L: Number of regular clients who are Indigenous, aged 15 and over, are recorded as having CVD and who have had an eGFR recorded within the previous 12 months with a result of less than 15.

Calculation M: Number of regular clients who are male, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of less than 2.5.

Calculation N: Number of regular clients who are male, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of greater than or equal to 2.5 but less than or equal to 25.

Calculation O: Number of regular clients who are male, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of greater than 25.

Calculation P: Number of regular clients who are female, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of less than 3.5.

Calculation Q: Number of regular clients who are female, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of greater than or equal to 3.5 but less than or equal to 35.

Calculation R: Number of regular clients who are female, Indigenous, aged 15 and over, are recorded as having Type II diabetes and who have had an ACR recorded within the previous 12 months with a result of greater than 35.

#### Numerator data elements:

Person	_diabetes	mellitus status	code NN
	-ulabeles	mennus status
