Acute stroke clinical care standard indicators: 4b-Proportion of patients with a final diagnosis of acute stroke assessed for ongoing rehabilitation using a structured assessment tool prior to separation from acute care, 2019-

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: Indicator 4b- Proportion of patients with a final diagnosis of acute stroke assessed

for ongoing rehabilitation using a structured assessment tool prior to separation

from acute care

METEOR identifier: 719058

Registration status: Australian Commission on Safety and Quality in Health Care, Qualified 09/09/2019

Description: Proportion of patients with a final diagnosis of <u>acute stroke</u> who are assessed for

ongoing stroke rehabilitation using a structured assessment tool prior to seperation

from acute care.

Indicator set: Clinical care standard indicators: acute stroke

Australian Commission on Safety and Quality in Health Care, Standard

03/11/2020

Collection and usage attributes

Computation description: A structured assessment tool such as the Australian Stroke Coalition

Rehabilitation Working Group. Assessment for Rehabilitation: Pathway and Decision-Making Tool should be used and the outcome of the assessment must be

documented in the medical record.

Both the numerator and the denominator include patients with a final diagnosis of acute stroke. The final diagnosis is made at the hospital where the patient is

admitted for the acute phase of management of their stroke.

Seperation from acute care is specified as either being transferred to another ward

or discharge to the community or home including an aged care facility.

Computation: (Numerator ÷ denominator) x 100

Numerator: Number of patients with a final diagnosis of acute stroke who were assessed for

rehabilitation using a structured assesment tool prior to discharge from the acute

care

Denominator: Number of patients with a final diagnosis of acute stroke
