Collection and usage attributes

Computation description: Both the numerator and the denominator include patients with a final diagnosis of

acute stroke. The final diagnosis is made at the hospital where the patient is

admitted for the acute phase of management of their stroke.

Both the numerator and the denominator only include patients separated to their usual residence, own accommodation or welfare institution following the acute episode of care (i.e. where Episode of admitted patient care—separation mode.code N = 9 Other). Welfare institutions includes prisons, hostels and group homes

providing primarily welfare services.

Both the numerator and denominator exclude:

• Acute stroke patients separated from hospital who do not have a carer.

• Acute stroke patients or carer(s) that refuse a formal assessment.

Presented as a percentage.

Computation: (Numerator ÷ denominator) x 100

Numerator: Number of patients with a final diagnosis of acute stroke whose carer(s) have had a

documented formal needs assessment.

Denominator: Number of patients with a final diagnosis of acute stroke who have a carer upon

separation from hospital.
