

Acute stroke clinical care standard indicators: 2b- Proportion of patients with a final diagnosis of ischaemic stroke who received endovascular thrombectomy, 2019-

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	Indicator 2b- Proportion of patients with a final diagnosis of ischaemic stroke who received endovascular thrombectomy
METEOR identifier:	719088
Registration status:	<ul style="list-style-type: none">• Australian Commission on Safety and Quality in Health Care, Qualified 09/09/2019
Description:	Proportion of patients with a final diagnosis of ischaemic stroke who received endovascular thrombectomy.
Indicator set:	Clinical care standard indicators: acute stroke Australian Commission on Safety and Quality in Health Care , Standard 03/11/2020

Collection and usage attributes

Computation description:	Presented as a percentage.
Computation:	$(\text{Numerator} \div \text{denominator}) \times 100$
Numerator:	Number of patients with a final diagnosis of ischaemic stroke who received endovascular thrombectomy.
Denominator:	Number of patients with a final diagnosis of ischaemic stroke.
Comments:	Eligibility for endovascular thrombectomy is defined as ischaemic stroke caused by a large vessel occlusion in the internal carotid artery, proximal cerebral artery (M1 segment), or with tandem occlusion of both the cervical carotid and intracranial arteries. Endovascular thrombectomy should be undertaken when the procedure can be commenced within six hours of stroke onset. (Goyal et al. 2016) or between 6-24 hours after they were last known to be well if clinical and CT perfusion or MRI features indicate the presence of salvageable brain tissue (Nogueira et al. 2017, Albers et al. 2018). This indicator only applies to hospitals able to provide endovascular thrombectomy.
