Person—underlying cause of death, code (ICD-10 2016 version) ANN{.N}

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Underlying cause of death

Synonymous names: UCOD code
METEOR identifier: 719784

Registration status: Health, Standard 16/01/2020

Definition: The disease or injury which initiated the train of morbid events leading directly to a person's death or the circumstances of the

accident or violence which produced the fatal injury, as represented by a code.

Data Element Concept: Person—underlying cause of death

Value Domain: Underlying cause of death code (ICD-10 2016 version) ANN{.N}

Value domain attributes

Representational attributes

Classification scheme: International Statistical Classification of Diseases and Related Health Problems, Tenth Revision (2016

version)

 Representation class:
 Code

 Data type:
 String

 Format:
 ANN{.N}

 Maximum character length:
 4

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Data element attributes

Collection and usage attributes

Guide for use: Underlying cause of death is central to mortality coding and comparable international mortality reporting.

Comments: The Australian Bureau of Statistics (ABS) codes and classifies the underlying cause of death (UCOD) according to the rules and

guidelines for mortality coding adopted by the World Health Assembly and set out in the World Health Organization's International

Classification of Diseases and Related Health Problems (ICD).

The ABS uses Iris to process and code cause-of-death information reported on death certificates.
