Australian Health Performance Framework: PI 3.1.8—Notification of selected childhood diseases, 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	AHPF PI 3.1.8—Notification of selected childhood diseases, 2020
METEOR identifier:	728412
Registration status:	Health , Superseded 07/09/2023
Description:	The rate of children aged less than 15 notified as having selected vaccine preventable diseases.
Rationale:	The <i>Immunise Australia</i> program has had a substantial influence on reducing rates for a wide variety of communicable diseases. Despite this progress, outbreaks of vaccine preventable diseases can still occur.
Indicator set:	Australian Health Performance Framework, 2020 Health , Superseded 11/07/2023

Collection and usage attributes

Population group age from:	Birth
Population group age to:	14 years
Computation description:	The rate per 100,000 children aged less than 15 notified as having selected vaccine preventable diseases.
Computation:	$100,000 \times (\text{Numerator} \div \text{Denominator})$
Numerator:	Number of children aged 0 to 14 who have been notified as having contracted measles, pertussis or invasive Haemophilus influenzae type b.

Numerator data elements:

Guide for use

National notifiable diseases register

Disaggregation:

Nationally, by:

- disease type
- state/territory
- age group
- sex
- Indigenous status.

Except for pertussis, numbers of notifications are too small for reporting by age group, sex or Indigenous status, and may also involve suppressions by state/territory.

Representational attributes

Representation class: Rate

Data type: Real

Unit of measure: Disease type

Format: N[NNN].N

Data source attributes

Data sources:**Data Source**

[National Notifiable Diseases Surveillance System \(NNDSS\)](#)

Frequency

Annual

Data custodian

Australian Government Department of Health

Accountability attributes

Reporting requirements: Australian Health Performance Framework

Organisation responsible for providing data: Australian Government Department of Health

Accountability: Australian Government Department of Health

Further data development / collection required: Mumps and other vaccine preventable communicable diseases could be considered for addition to the numerator.

Other issues caveats: The 3 vaccine preventable diseases selected for this indicator are the 3 currently reported by the Productivity Commission.

Available diagnostic tools make it uncommon for cases of measles or invasive Haemophilus influenzae type b to go undiagnosed, however, diagnosis of pertussis cannot always be confirmed using available tools ([Productivity Commission 2019: Table 10A.57](#))
