<b>Computation:</b>	Infants (under 1 year old): 1,000 x (Numerator ÷ Denominator) Children (0–4 year olds): 100,000 x (Numerator ÷ Denominator)  Calculated separately for each of the two age groups, and for all Australians, Indigenous and non-Indigenous Australians.  Presented as: <ul style="list-style-type: none"><li>• number of deaths per 1,000 live births (infant)</li><li>• number of deaths per 100,000 population (child).</li></ul> Infant mortality rates: The rates for a single year use single year infant deaths for the numerator, and the number of single year live births for the denominator.  Child mortality rates: The rates for a single year use single year data for the numerator, and the number of single year population for the denominator.

**Comments:**

Most recent data available for 2020 Australian Health Performance Framework reporting: 2018.

Deaths registered in 2015 and earlier are based on the final version of cause of death data; deaths registered in 2016 are based on the revised version; and deaths registered in 2017 and 2018 are based on the preliminary version. Revised and preliminary versions are subject to further revision by the Australian Bureau of Statistics (ABS).

A number of updates to the ICD-10 were applied to the 2013 causes of death data. Details of the impact of these changes on the mortality data are described in [ABS Implementation of the Iris Software: Understanding Coding and Process Improvements](#).

Prior to 2013, mortality data were coded using ICD-10 2006 version. 2013 data were coded using ICD-10 2013 version; 2014–2017 data were coded using ICD-10 2015 version; 2018 data were coded using ICD-10 2016 version.

Single year data are reported for time series analysis.
