National Core Maternity Indicators: PI 13–Third and fourth degree tears for vaginal births, 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Common name:	Third and fourth degree tears for vaginal births
Short name:	PI 13–Third and fourth degree tears for vaginal births, 2020
METEOR identifier:	728734
Registration status:	Health , Superseded 17/12/2021
Description:	The proportion of all females who have a third or fourth degree perineal laceration after giving birth vaginally for (a) all first births and (b) all births.
Rationale:	Third and fourth degree perineal lacerations cause significant ongoing maternal morbidity. This is an outcome indicator that measures the occurrence of third and fourth degree perineal lacerations.
Indicator set:	National Core Maternity Indicators, 2020 Health , Superseded 17/12/2021

Collection and usage attributes

Computation description:	<p>(a) The number of females who had a third or fourth degree perineal laceration after giving birth for the first time and birth vaginally, divided by the number of females who gave birth for the first time and birth vaginally, and multiplied by 100.</p> <p>(b) The number of females who had a third or fourth degree perineal laceration after giving birth vaginally, divided by the number of females who gave birth vaginally, and multiplied by 100.</p> <p>A birth is defined as the complete expulsion or extraction from a female, of a product of conception of 20 or more completed weeks of gestation or of 400 grams or more birthweight.</p> <p>Births included are vaginal births, including non-instrumental and instrumental births. A non-instrumental vaginal birth is one in which the baby is born through the vagina without the assistance of instruments. An instrumental birth is a procedure that uses instruments (forceps or vacuum extraction) to assist the baby to come out through the vagina.</p> <p>Births excluded are caesarean sections.</p> <p>Third degree laceration is defined as perineal laceration, rupture or tear as in second degree laceration occurring during delivery, also involving: anal sphincter, rectovaginal septum, and sphincter not otherwise specified. Excludes laceration involving the anal or rectal mucosa. Fourth degree laceration is defined as perineal laceration, rupture or tear as in third degree laceration occurring during delivery, also involving: anal mucosa and rectal mucosa.</p>
Computation:	$100 \times (\text{Numerator} \div \text{Denominator})$
Numerator:	<p>(a) The number of females who had a third or fourth degree perineal laceration after giving birth for the first time and birth vaginally.</p> <p>(b) The number of females who had a third or fourth degree perineal laceration after giving birth vaginally.</p>

Disaggregation:

- Year of birth
- State or territory of birth
- Mother's age at birth
- Hospital annual number of births
- Hospital sector
- Remoteness category (from mother's area of usual residence)
- Indigenous status of mother
- With and without episiotomy
- Mother's country of birth
- Primary Health Network (from mother's area of usual residence)
- Statistical local area 3 (from mother's area of usual residence)

Comments:

Data elements are from the Perinatal National Minimum Data Set (NMDS) or have been provided as voluntary non-standardised items by states and territories. Records with a permissible value have been included in the denominator.

For the 2013 analysis, third and fourth degree tears was calculated using *Labour complication: third/fourth degree* data item. A revised collection of perineal status data items in the Perinatal NMDS was introduced in 2014, which meant that the perineal status was split between seven perineal status data items. As a result, for 2014 onwards analysis, third and fourth degree tears was calculated using two data items, *Perineal status: third degree laceration* (code 4) and *Perineal status: fourth degree laceration* (code 7).

Modified from Australian Council on Healthcare Standards (ACHS) Indicator 3.1-3.6: Major perineal tears and surgical repair of the perineum. This ACHS indicator is based on the definition by Women's Healthcare Australasia Core Maternity Indicators Project (WHA 2007).
