Guide for use:

The definition of a start date on which an episode of care commences may differ between settings. Therefore, for the purposes of activity based funding reporting the following definitions apply:

Admitted episodes refer to the period of care provided to a consumer who is admitted for care to a specialised psychiatric inpatient service or to a general public hospital for the purposes of receiving mental health care (i.e. the consumer would have a mental health care type). The period of care is commenced when the consumer has an [admission](#) and ceases with a [separation](#). The admission and/or separation may be formal or statistical.

Ambulatory episodes refer to the care provided to consumers in a non-admitted setting and which does not take place in an admitted or residential setting. The service providing the care may be a specialised community-based [ambulatory mental health service](#) or it may be a non-specialised non-admitted public hospital service. The commencement of an ambulatory episode will occur in conjunction with a service contact, that may have been triggered by a new referral to community care or, if the consumer has previously been treated by the ambulatory team, the recommencement of care for a specified purpose or goal.

Residential episodes refer to the period of care provided to a consumer who is admitted for care to a specialised community-based residential service. This period of care commences with an admission, and ceases with a separation. An episode reference period may be submitted when an episode continues for more than one financial year.

Collection methods:

The values for this data element can be derived from existing data collections in the following circumstances:

Admitted patients - [Episode of admitted patient care—admission date, DDMMYYYY](#)

Residential patients - [Episode of residential care—episode start date, DDMMYYYY](#).
