# State Owned and Managed Indigenous Housing Data Collection, 2019–20; Quality Statement

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Quality Statement
<b>METEOR identifier:</b>	731016
<b>Registration status:</b>	<a href="#">AIHW Data Quality Statements</a> , Superseded 08/12/2021

## Data quality

<b>Data quality statement summary:</b>	<b>Description</b>
	<p>Five states and territories—New South Wales, Queensland, South Australia, Tasmania and the Northern Territory—provide a range of State Owned and Managed Indigenous Housing (SOMIH) programs and maintain administrative data sets about these programs. Extracts of these data sets are provided annually to the Australian Institute of Health and Welfare (AIHW).</p> <p>This collection contains information about SOMIH dwellings, households assisted and households on the waiting list. Data are provided for the following two reference periods: 2019–20 financial year and point in time at 30 June 2020.</p> <p><b>Summary</b></p> <ul style="list-style-type: none"><li>• The data collected are an administrative by-product of the management of SOMIH programs and conform well in terms of scope, coverage and reference period.</li><li>• The administrative data sets from which this collection is drawn have inaccuracies to varying degrees, including missing data, out-of-date data and data coding or recording errors.</li><li>• Care is required when comparing outputs across states and territories. Differences in the data collected, including which records are included or excluded from a calculation, can affect the coherence of the outputs. Coherence over time has been affected by changes in methodology (see 'coherence' section for details).</li></ul>

**Institutional environment:** The AIHW is a major national agency set up in 1987 by the Australian Government under the [Australian Institute of Health and Welfare Act 1987](#) (Cwlth) to provide reliable, regular and relevant information and statistics on Australia's health and welfare. It is an independent statutory authority, which is governed by a [management board](#), and accountable to the Australian Parliament through the Australian Government Health portfolio.

The AIHW aims to improve the health and wellbeing of Australians through better health and welfare information and statistics. It collects and reports information on a wide variety of topics and issues, including health and welfare expenditure, hospitals, disease and injury, mental health, ageing, homelessness, disability and child protection.

The AIHW also plays a role in developing and maintaining national metadata standards. This work helps improve the quality and consistency of national health and welfare statistics. The AIHW works closely with governments and non-government organisations to achieve greater adherence to those standards in administrative data collections to promote national consistency and comparability of data and reporting.

One of the main functions of the AIHW is to work with the states and territories to improve the quality of administrative data and, where possible, to compile national data sets based on data from each jurisdiction, analyse the data sets, and disseminate information and statistics.

Compliance with the provisions of both the *Australian Institute of Health and Welfare Act* and the [Privacy Act 1988](#) (Cwlth) ensures that the data collections managed by the AIHW are kept securely and under the strictest conditions to preserve privacy and confidentiality.

For further information, see [www.aihw.gov.au](http://www.aihw.gov.au).

The AIHW receives, compiles, edits and verifies the data in collaboration with states and territories. The finalised data sets are signed off by the states and territories and used by the AIHW for reporting, analysis and approved ad hoc data requests. Requests for jurisdiction-level data releases must be signed off by the relevant state or territory.

**Timeliness:** The reference period for the SOMIH collection is based on the financial year (ending 30 June). The specific reference period for these data is 2019–20.

**Accessibility:** Data are reported in the AIHW's annual [Housing assistance in Australia](#) reports and the Productivity Commission's annual [Report on government services](#).

Users can request additional disaggregation of data which are not available online or in reports (subject to the AIHW's confidentiality policy and state and territory approval) via the AIHW's online data request system at <https://www.aihw.gov.au/our-services/data-on-request>. Depending on the nature of the request, requests for access to unpublished data may also incur costs or require approval from the AIHW Ethics Committee.

General enquiries about AIHW publications can be directed to [info@aihw.gov.au](mailto:info@aihw.gov.au).

**Interpretability:** Metadata and definitions relating to this data source can be found in the [Public Housing and State Owned and Managed Indigenous Housing \(PH & SOMIH\) data set specification 2018-](#).

Supplementary information can be found in the housing collection data manuals which are available upon request.

**Relevance:** The data collected are an administrative by-product of the management of SOMIH programs and conform well in terms of scope, coverage and reference period. SOMIH programs are delivered in only 5 states and territories—New South Wales, Queensland, South Australia, Tasmania and the Northern Territory.

Classifications used for *income*, *disability status*, *greatest need* and *vacancy reason* are not consistent across the states and territories, however, the states and territories map these data to an AIHW standard.

**Accuracy:** There are known accuracy issues with the data collected:

- The administrative data sets from which this collection is drawn have

inaccuracies to varying degrees including missing data, out-of-date data and data coding or recording errors.

- Not all states and territories capture all data items. For those outputs that are calculated using *gross income*, New South Wales and South Australia use *assessable income* instead. (Assessable income is the income amount used to establish eligibility for housing assistance and each jurisdiction uses its own definition of assessable income.) In addition, *disability status* is derived as a proxy using a combination of the receipt of a disability pension along with other information in New South Wales, Queensland, South Australia and Tasmania.
- Information about disability is not reported under eligibility requirements in some jurisdictions.
- Indigenous status is self-identified and not reported under eligibility requirements in some jurisdictions.
- Most states and territories do not update income information for non-rebated households, that is, households who pay the market rent value of the dwellings. Therefore, some household income information may be coded as missing or not reflect current income levels. Outputs produced that require income information do not include households with missing income and therefore may not be complete.
- All jurisdictions have a form of integrated waitlist across social housing programs. Waitlist data are reported separately for each social housing program applied for. Counting rules for the number of applicants for any given program may vary across jurisdictions.

#### *State- and territory-specific issues:*

##### **New South Wales**

- Since a system change in 2010, New South Wales continues to report problems encountered when linking files containing date variables within their system. This may occur when linking 'dwelling history', 'household' and 'waitlist' files. Where date variables contradict between files, they are recoded as missing.
- Income details are only reported for rebated households, that is, 74% of all households.

##### **Queensland**

- There was a major system change in 2019–20. This affected the following:
  - Migration issues meant Queensland were unable to report household income for some households.
  - Changes to the categorisation of vacancy reason.
  - Identifiers (for example, dwelling and household ID) are not consistent with previous years meaning descriptors related to sustaining a tenancy for 12 months or more could not be calculated.
  - The methodology for differentiating between public housing (PH) and SOMIH applications changed.
- Income details are only reported for rebated households, that is, 85% of all households.
- SOMIH households are assumed to be Indigenous households.
- Market rent is only current for occupied dwellings.
- There is one waiting list for social housing in Queensland. Applicants for the SOMIH program may also be reported in the community housing waitlist data. Applicants eligible for both the PH and SOMIH programs are reported only in the SOMIH waitlist data.

##### **South Australia**

- In April 2020, Housing SA implemented a new data collection system. A number of data migration errors and coding changes in the new system led to reporting errors or an inability to provide items in 2019–20. In particular:
  - Income unit identifier was not provided.
  - Greatest need is likely to be an undercount due to a data migration error.
  - South Australia can no longer distinguish between greatest need reasons. For greatest need households, greatest need reason is

reported as homeless (code 1).

However, data cleansing before migration to the new system resulted in better data quality and less missing information regarding bedroom and/or required bedroom details.

- From April 2020, eligible applicants were registered for both the PH and SOMIH programs. These applicants are reported only in the SOMIH waitlist data.
- Housing SA did not supply the 'dwelling history' file for 2019–20, which includes the variables necessary for the calculation of turnaround time.

### **Tasmania**

- Greatest need information is not collected for SOMIH applicants.

### **Northern Territory**

- Greatest need information is not collected for SOMIH applicants.
- Income is not an eligibility factor for SOMIH and therefore a large proportion of households elect not to provide income information. There are significant gaps in the collection of individual client income information.

### **Coherence:**

States and territories may publish their own analysis of SOMIH data which may vary in scope from this collection.

Data for individual states and territories may not be comparable to previous years due to changes in systems and processes which have led to differences in the accuracy and completeness of the data over time. Differences between states and territories concerning incomplete or missing information, out-of-date information and coding errors can affect the coherence of the outputs.

Coherence over time has also been affected by changes in methodology:

- For 2018–19 and 2019–20, remoteness area (RA) is determined using a concordance between 2018 postcodes and the Australian Bureau of Statistics (ABS) 2016 RA classification. For 2018–19, a concordance between 2017 postcodes and the 2016 RA classification was used. Previous years used a concordance between 2012 postcodes and the 2011 RA classification. Care is therefore required when comparing remoteness data across time.
- Measurements using low income cannot be directly compared with low income measures produced prior to 2009–10 due to a change in methodology. From 2009–10 onwards, low income cut-offs were obtained from the biennial ABS Survey of Income and Housing (SIH). Low income cut-offs for 2018–19 and 2019–20 are based on 2017–18 SIH results. Care is required when comparing low income measures over time.
- Measurements of overcrowding cannot be directly compared with figures produced prior to 2009–10 due to a change in methodology. Prior to 2009–10, overcrowding was measured using a proxy standard of '2 or more bedrooms are required'. From 2009–10 onwards, overcrowding was measured using the Canadian National Occupancy Standard (CNOS) of '1 or more bedrooms are required'.
- Measurements of underutilisation cannot be directly compared with figures produced prior to 2011–12 due to changes in methodology. Prior to 2009–10, underutilisation was measured using a proxy standard of '2 or more spare bedrooms'. From 2009–10 to 2010–11, underutilisation was measured using the CNOS of '1 or more spare bedrooms'. From 2011–12 onwards, underutilisation was measured using the revised CNOS of '2 or more spare bedrooms'.

State and Territory Government housing authorities' bedroom entitlement policies may differ from the CNOS which is used in dwelling utilisation calculations.

### *State- and territory-specific issues:*

#### **New South Wales**

- From 2011–12, previous rent charged is not a mandatory field to be provided by new tenants in their application for housing assistance. As a result, the

number of new allocations to households in greatest need is underestimated due to the exclusion of households with very high rental housing costs.

- A new maintenance system was introduced during 2016–17. The transition and implementation timing meant there were significant data gaps in the 'dwelling history' file. Therefore, New South Wales did not supply the 2016–17 'dwelling history' file which includes the variables necessary for the calculation of turnaround time.
- The 2016–17 waitlist data excluded suspended applicants, therefore data may not be comparable to previous years.
- In 2017–18, dwellings identified for disposal and dwellings leased to a community organisation were reported for the first time. Person information is not available for these dwellings.

### Queensland

- The mapping of priority reason to national greatest need reason changed in 2019–20.

### South Australia

- Since 2012–13, Housing SA has been unable to provide the 'dwelling history' file which includes the variables necessary for the calculation of turnaround time.

### Tasmania

- Housing Tasmania implemented a new Housing Management System (HMS) in November 2016. There was a gap in the data collection from 2016–17 when income details and wait times were not available for applicants who registered prior to October 2016. This is improving over time.
- In previous years, waitlist data included transfer applicants who were not on the housing register. From 2017–18 this is no longer the case but caution should be taken when comparing waitlist data to previous years.
- In 2018–19, relationship status for household members was not consistently recorded resulting in a number of unknown values for overcrowding and underutilisation measures.

### Northern Territory

- Around 5,000 social housing dwellings in the Northern Territory were transferred from the Indigenous Community Housing collection to remote public housing between 2008 and 2010 and have been excluded from administrative data collections between 2008–09 and 2015–16, inclusive. In 2016–17, these dwellings were reported in the SOMIH collection. Due to data quality issues, limited aggregate information were provided in 2016–17. Unit record data were provided in 2017–18.
- Prior to 2018–19, reinstated applications (where contact with a new applicant had been lost then re-established) were reported as transfers instead of new households. In 2018–19, these applications were reported as new households. As a result, in previous years total new applicants (excluding transfers), new greatest need applicants and new households assisted were understated and transfer applicants and relocating households were overstated. In 2019–20, reinstated applicants who relocated to another dwelling in the same housing program but chose to wait for their transfer in private accommodation were counted as transfers.
