

# Birth event—type of analgesia administered

<b>Metadata item type:</b>	Data Element Concept
<b>METEOR identifier:</b>	733091
<b>Registration status:</b>	<ul style="list-style-type: none"><li>• <a href="#">Health</a>, Standard 03/12/2020</li></ul>
<b>Definition:</b>	The type of <a href="#">analgesia</a> administered to a female during a birth event.
<b>Context:</b>	Perinatal

## Object Class attributes

### Identifying and definitional attributes

<b>Object class:</b>	<a href="#">Birth event</a>
<b>Definition:</b>	The sequence of actions by which a baby and the placenta are expelled or extracted from the female's uterus at childbirth. The process usually starts spontaneously about 280 days after conception with onset of labour, but it may be started by artificial means. The process ends upon complete expulsion or extraction of the baby and the placenta.
