Female—primary maternity model of care, identifier NNNNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Primary maternity model of care
METEOR identifier:	733531
Registration status:	Health, Standard 03/12/2020
Definition:	The maternity model of care a female received for the majority of pregnancy care, as represented by a numeric identifier.
Context:	Perinatal
Data Element Concept:	Female—primary maternity model of care
Value Domain:	Identifier NNNNNN

Value domain attributes

Representational attributes

Representation class:	Identifier
Data type:	Number
Format:	NNNNNN
Maximum character length:	6

Data element attributes

Collection and usage attributes

Guide for use:	This value is populated using the Maternity Care Classification System (MaCCS) and is the value of the unique model of care code. The model of care a female received for the majority of pregnancy care, as determined by the number of antenatal visits within that model of care. Where the number of antenatal visits is equal for more than one model of care, the referring model of care should be selected. For example, if a female was in a low-risk GP shared care model for 6 antenatal visits and then developed hypertension and pre-eclampsia and was referred to a high-risk model for 6 antenatal visits, the GP shared care should be selected for this data element.
Collection methods:	To be collected once, after the birth.
