Female—primary maternity model of care, identifier NNNNNN

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Primary maternity model of care

METEOR identifier: 733531

Registration status: Health, Standard 03/12/2020

Definition: The maternity model of care a female received for the majority of pregnancy care,

as represented by a numeric identifier.

Context: Perinatal

Data element concept attributes

Identifying and definitional attributes

Data element concept: Female—primary maternity model of care

METEOR identifier: 704351

Registration status: Health, Standard 20/11/2019

Definition: The maternity model of care a female received for the majority of pregnancy care.

Object class: <u>Female</u>

Property: Primary maternity model of care

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare

Value domain attributes

Identifying and definitional attributes

Value domain: Identifier NNNNNN

METEOR identifier: 315100

Registration status: Community Services (retired), Standard 15/09/2007

Health, Standard 14/05/2015

Commonwealth Department of Health, Retired 19/10/2023

Definition: A combination of numeric characters that identify an entity.

Representational attributes

Representation class: Identifier

Data type: Number

Format: NNNNNN

Maximum character length: 6

Data element attributes

Collection and usage attributes

Guide for use: This value is populated using the Maternity Care Classification System (MaCCS)

and is the value of the unique model of care code.

The model of care a female received for the majority of pregnancy care, as determined by the number of antenatal visits within that model of care.

Where the number of antenatal visits is equal for more than one model of care, the referring model of care should be selected. For example, if a female was in a low-risk GP shared care model for 6 antenatal visits and then developed hypertension and pre-eclampsia and was referred to a high-risk model for 6 antenatal visits, the

GP shared care should be selected for this data element.

Collection methods: To be collected once, after the birth.
