Indigenous-specific primary health care: PI01a- Number of Indigenous babies born within the previous 12 months who have birthweight recorded, December 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	PI01a-Number of Indigenous babies born within the previous 12 months who have birthweight recorded, December 2020
METEOR identifier:	739294
Registration status:	Indigenous , Superseded 03/07/2022
Description:	Number of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care organisation.
Rationale:	Low birthweight (newborn babies weighing less than 2,500 grams) is associated with an increased risk of ill health and is related to higher mortality within the first year of life. Low birthweight is a particular issue for Indigenous Australians. Recording birthweight encourages the provision of appropriate care to limit the negative associations of low birthweight.
Indicator set:	Indigenous-specific primary health care national key performance indicators December 2020 Indigenous , Superseded 03/07/2022

Collection and usage attributes

Computation description:	Count of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care organisation. Presented as a number. Birthweight is defined as the first weight of a baby obtained after birth. Only live births are included. Results arising from measurements conducted outside of the organisation that are known by the organisation are included in the calculation of this indicator. 'Previous 12 months' refers to the previous financial year or previous calendar year.
Computation:	Numerator only.
Numerator:	Number of Indigenous babies born within the previous 12 months whose birthweight has been recorded at the primary health-care organisation.

Numerator data elements:**Data Element / Data Set**
