Indigenous-specific primary health care: Pl02a-Number of Indigenous babies born within the previous 12 months who have a birthweight result within specified categories, December 2020

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	Pl02a-Number of Indigenous babies born within the previous 12 months who have a birthweight result within specified categories, December 2020
METEOR identifier:	739305
Registration status:	Indigenous, Superseded 03/07/2022
Description:	Number of Indigenous babies born within the previous 12 months whose birthweight results were categorised as one of the following:
	 Low (less than 2,500 grams) Normal (2,500 grams to less than 4,500 grams) High (4,500 grams and over).
Rationale:	Low birthweight (newborn babies weighing less than 2,500 grams) is associated with an increased risk of ill health and is related to higher mortality within the first year of life. Low birthweight is a particular issue for Indigenous Australians. Recording birthweight encourages the provision of appropriate care to limit the negative associations of low birthweight.
Indicator set:	Indigenous-specific primary health care national key performance indicators December 2020 Indigenous, Superseded 03/07/2022

Collection and usage attributes

Computation description:	Count of Indigenous babies born within the previous 12 months whose birthweight results were categorised as one of the following:
	 Low (less than 2,500 grams) Normal (2,500 grams to less than 4,500 grams) High (4,500 grams and over).
	Presented as a number.
	Birthweight is defined as the first weight of a baby obtained after birth.
	Calculated separately for each weight range.
	Excludes multiple births and stillbirths. Births that are at least 20 weeks gestation or at least 400 grams birthweight are included.
	Excludes unknown birthweight and unknown gestational age.
	'Previous 12 months' refers to the previous financial year or previous calendar year.
Computation:	Numerator only.

Calculation A: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care organisation with a result categorised as low (less than 2,500 grams).

Calculation B: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care organisation with a result categorised as normal (2,500 grams to less than 4,500 grams).

Calculation C: Number of Indigenous babies born within the previous 12 months whose birthweight was recorded at the primary health-care organisation with a result categorised as high (4,500 grams and over).

Data Element / Data Set

Person-Indigenous status, code N

Data Source

Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators (nKPI) data collection

NMDS / DSS

Indigenous-specific primary health care NBEDS December 2020

Guide for use

The baby is considered Indigenous if one or both parents identify as Indigenous.

- Data Element / Data Set-

Product of birth—birthweight, code N

Data Source

Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators (nKPI) data collection
