## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Output measure
<b>Short name:</b>	PI24a-Number of Indigenous regular clients with type 2 diabetes who have a blood pressure measurement result within a specified category, December 2020
<b>METEOR identifier:</b>	739481
<b>Registration status:</b>	<ul style="list-style-type: none"><li>• <a href="#">Indigenous</a>, Standard 14/07/2021</li></ul>
<b>Description:</b>	Number of <a href="#">Indigenous regular clients</a> with type 2 diabetes whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.
<b>Rationale:</b>	The blood pressure target for people with type 2 diabetes is less than or equal to 130/80 mmHg. ## Collection and usage attributes

<b>Computation description:</b>	<p>Count of <a href="#">Indigenous regular clients</a> with type 2 diabetes whose blood pressure measurement result, recorded within the previous 6 months, was less than or equal to 130/80 mmHg.</p> <p>Presented as a number.</p> <p>Exclude type 1 diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, impaired glucose tolerance.</p> <p>The client does not have a blood pressure measurement of less than or equal to 130/80 mmHg if either the systolic or diastolic reading is above the threshold (130 and 80 respectively).</p> <p>In the general population, blood pressure over 140/90 mmHg is considered high. The blood pressure target for those with type 2 diabetes is less than or equal to 130/80 mmHg as it is shown to significantly decrease macrovascular (stroke, heart attack and heart failure) and microvascular (kidney disease, eye disease and peripheral neuropathy) complications.</p> <p>If the client has had more than one blood pressure measurement within the previous 6 months, only the most recently recorded result is included in this calculation.</p>
<b>Computation:</b>	Numerator only
