#### Disaggregation:

2017, 2018, 2019 — State and territory, by:

- cancer type
- cancer type and Indigenous status
- cancer type and remoteness (Australian Statistical Geography Standard (ASGS) 2016 Remoteness Structure)
- cancer type and 2016 SEIFA IRSD quintiles (not reported).

2017, 2018, 2019 — Nationally, by:

- cancer type and 2016 SEIFA IRSD deciles (not reported).

Cancer types in these disaggregations comprise: bowel cancer (ICD-10 2016 version codes C18–C20), lung cancer (C33–C34), melanoma of the skin (C43), female breast cancer (C50) and cervical cancer (C53).

Disaggregations by remoteness are based on the Statistical Area Level 2 (SA2) of the patient's usual residence at the time of diagnosis, using the 2016 ASGS.

The 2019 tables only include data from Victoria and South Australia.

Some disaggregation may result in numbers too small for publication.

Used for disaggregation by state/territory, remoteness and SEIFA.

**Comments:**

Most recent data available for 2022 National Healthcare Agreement performance reporting: 2019 for Victoria and South Australia; 2018 for New South Wales, Queensland, Western Australia, Tasmania and the Australian Capital Territory; 2017 for the Northern Territory.

Incidence rates of cancers in jurisdictions with smaller populations can fluctuate considerably from year to year. Comparisons across time and between jurisdictions should be made with caution.

New South Wales data for 2018 are partially incomplete with respect to death-certificate-only cases. Therefore, the counts and rates are slight under-estimates.

Further details on cancer incidence in Indigenous Australians are available from the Aboriginal and Torres Strait Islander Health Performance Framework ([measure 1.08: Cancer](#)).
