Youth Justice NMDS 2018–20

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	744068
Registration status:	Youth Justice, Superseded 23/08/2022
DSS type:	National Minimum Data Set (NMDS)
Scope:	

The Youth Justice National Minimum Data Set (YJ NMDS) 2018–20 contains information about young people under youth justice supervision in Australia. Young people under youth justice supervision are defined as those who are under the supervision or case management of a youth justice agency because they have:

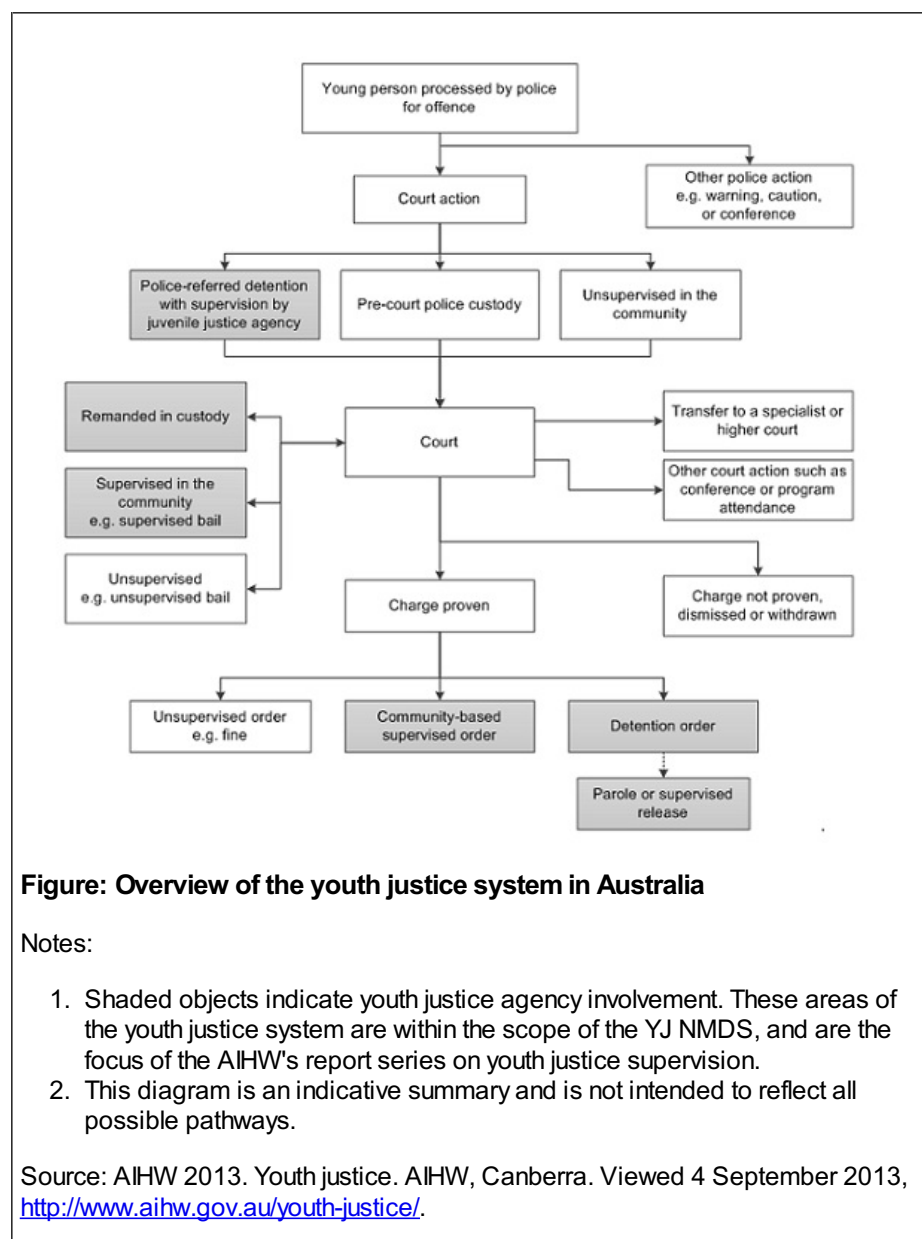

- committed or allegedly committed an offence between the ages of 10–17 years

OR

- committed or allegedly committed an offence when aged over 17 years and who are treated as young people due to their vulnerability or immaturity.

It does not contain information on young people who are not supervised or case managed by a youth justice agency (for example, young people supervised by an adult correctional agency).

The figure below summarises a range of possible pathways through the youth justice system. The stages that require a young person to be supervised by youth justice agencies and are to be included in the YJ NMDS are shaded. These stages are the focus of the Australian Institute of Health and Welfare's (AIHW) reporting series on youth justice supervision.

YJ NMDS files (data element clusters)

The YJ NMDS 2018–20 contains four files: client file, order file, detention file and order types file.

Youth Justice Client file cluster

The client file cluster contains demographic information on young people under youth justice supervision.

Youth Justice Order file cluster

The order file cluster contains information about the supervised orders handed down by courts and parole boards to young people under youth justice supervision.

Youth Justice Detention file cluster

The detention file cluster contains information about the periods of detention of young people under youth justice supervision. A detention period relates to the period of time a young person is detained in a youth justice remand or detention centre in relation to a particular detention type. A new reception into a detention centre, a change in legal status and a transfer to another detention centre all start a new detention period, while a release from a detention centre, a transfer to another centre or another jurisdiction, a change in legal status, an escape and an abscond all end a detention period.

Youth Justice Order types file cluster

The order types file cluster links the orders available in jurisdictions with the national order categories.

Collection and usage attributes

Statistical unit: Person

Implementation start date: 01/07/2018

Implementation end date: 30/06/2020

Comments: In April 2019 the Australasian Youth Justice Administrators changed their name (and the name of the collection), replacing 'juvenile justice' with 'youth justice'.

Youth Justice NMDS redevelopment

Previous versions of the YJ NMDS comprised a client file, an episode file and a centre file. The episode file contained information on a young person's most serious supervised order, that is, if a young person was being supervised in relation to more than one order at any one time, only information on the most serious order was collected.

Following the review of the YJ NMDS by KPMG in 2008 and 2009, the YJ NMDS was redeveloped and the episode file was replaced with an order file and a detention file and an order type file was added to the NMDS. The client file and the centre file were not altered. A number of data items were added to the YJ NMDS and existing data item names were updated to match the data item names used in METeOR.

The centre file was removed from YJ NMDS in 2011.

The four files collected for the YJ NMDS have been replicated in METeOR as DSS clusters listed as follows:

- Youth Justice Client file cluster
- Youth Justice Order file cluster
- Youth Justice Detention file cluster
- Youth Justice Order types file cluster.

2 [Order—order identifier, X\[X\(49\)\]](#)

Mandatory 99

DSS specific information:

For the purposes of the YJ NMDS, this unique identifier is retained across collection periods. The identifier is assigned by the State or Territory youth justice department.

In the order file, the order identifier will in most cases be unique. However, where a single order specifies multiple types of supervision, for example a blended order that specifies a period in detention followed by a period of community-based supervision, the information relating to each type of supervision will comprise a separate record but the order identifier will remain the same.

In the example below, order #10001 is a blended order that comprises a period in detention from 1/1/08 to 1/6/08 followed by a period in the community from 1/6/08 to 1/12/08. Order #10002 is an unrelated remand order.

Person identifier	Order identifier	Order start date	Order end date	Order type-national	Order end reason	Comment
1	10001	01/01/08	01/06/08	35 (sentenced detention)	completed	blended order part 1
1	10001	01/06/08	01/12/08	31 (sentenced community-based with and without additional mandated requirements)	completed	blended order part 2
1	10002	15/01/09	20/01/09	21 (remand)	completed	unrelated order

Queensland: Don't count detention orders that are followed by a period of supervised release as blended orders.

Business rules

- If the [order identifier](#) matches the order identifier of another record and the person identifiers are the same, the [order end date](#) of the first record should equal the [order start date](#) of the second record.
- The [order identifier \(charge file\)](#) must be in the order file.
- If the [order type \(order file\)](#) is an unsentenced order then there must be a record in the charge file with a matching [order identifier](#).
- The [order identifier \(offence file\)](#) must be in the order file.

Seq No.	Metadata item	Obligation	Max occurs
3	Order—order start date, DDMMYYYY	Mandatory	99
<i>DSS specific information:</i>			
Guide for use			
<p>This date may not necessarily be the date that supervision began; for example, if a sentence of detention is backdated to the start of the young person's remand period, the order start date will be before the period of sentenced detention actually began.</p> <p>Orders may be concurrent and overlap; that is, the order start date may be before the order end date of the previous order.</p> <p>The order start date is the date the order first comes into effect, which may not necessarily be the same as the date the court handed down the order. Orders that are handed down by a court to take effect in the future should not be backdated to the date they were handed down.</p>			
Business rules			
<ul style="list-style-type: none"> • The order start date must be on or before the order end date. • The young person should be aged at least 10 years (based on date of birth) at the order start date. • The young person should be aged 10–25 years (inclusive) at the order start date. • The order start date must be on or before the end of the reporting period. • If the order end reason for a previous order was 3 (death) there must not be any subsequent orders. • If the order identifier matches the order identifier of another record and the person identifiers are the same, the order end date of the first record should equal the order start date of the second record. 			
4	Order—order issue date, DDMMYYYY	Mandatory	99
<i>DSS specific information:</i>			
Guide for use			
<p>The order issue date is the date on which a legal order or arrangement is handed down or issued by the court.</p> <p>The order issue date can differ from the order start date as it is the date that the order was handed by the court, while the order state date is the date an order comes into effect.</p> <p>Orders can be handed down to take effect in the future. In these cases, the order issue date will be before the order start date.</p> <p>The order issue date can be equal to the order start date if the order was issued on the same day that the order came into effect.</p> <p>The order issue date can also be after the order start date if the court order was backdated to take into account time already served. For example, if a sentence of detention is backdated to the start of the young person's remand period, the order start date will be before the period of sentenced detention actually began.</p>			

Seq No.	Metadata item	Obligation	Max occurs
5	Order—order end date, DDMMYYYY	Mandatory	99
<i>DSS specific information:</i>			
Guide for use			
<p>The order end date is the date the order ceases to be in effect, as specified on the order.</p> <p>If a young person ceases to be under the supervision relating to the order, but the order is still in effect, the order does not end. For example, if a young person is given a sentenced detention order with an end date of 1 December but is released on supervised release or parole on 1 November, the order end date remains 1 December unless the court varies the end date of the order.</p> <p>If the court varies the end date of the order, the new (varied) end date is the order end date.</p> <p>If an order is revoked or cancelled, the order end date is the date that the order was revoked or cancelled. This includes orders that are revoked or cancelled due to re-offending or failure to comply with conditions and orders that are cancelled, quashed or varied on appeal.</p> <p>If an order extends over two or more reporting periods and the order end date changes because the order was revoked, cancelled, quashed or varied, the order end date and the order end reason will differ between data submissions. The changed order end date should be supplied in the reporting period in which the order was revoked, cancelled, quashed or varied; however, a related record supplied in a previous data submission should not be updated. For example, a record relating to order ID 101 was supplied for the reporting period 2009–10 with an end date of 1/6/11 (that is, the order end date was after the end of the reporting period). A record relating to the same order was supplied in the following reporting period, 2010–11, but the order had been varied and now has an end date of 1/7/09. It is sufficient to report this new end date in the 2010–11 reporting period; a 'fix' is not required for the records relating to this order supplied in previous data submissions.</p> <p>When an order end date is after the end of the reporting period (e.g. for the 2009–10 reporting period, after the 30/06/2010) or if the order end date is null in the local data system, supply the order end date or insert the dummy date (22/02/2222) if the order end date is unknown. Do not end the order at the end of the reporting period.</p>			
Business rules			
<ul style="list-style-type: none"> • The order end date must be on or after the start of the reporting period. • The order start date must be on or before the order end date. • If the order end date is on or before the end of the reporting period, the order end reason must be a reason other than 0 (not applicable). • If the order identifier matches the order identifier of another record and the person identifiers are the same, the order end date of the first record should equal the order start date of the second record.
