Emergency service stay—waiting time, total minutes NNNNN

Exported from METEOR (AIHW's Metadata Online Registry)

Emergency service stay—waiting time, total minutes NNNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Emergency service waiting time to clinical care commencement
METEOR identifier:	745735
Registration status:	Health, Standard 20/10/2021
Definition:	The time elapsed in minutes for each patient from presentation in the **emergency service** to the commencement of the emergency service non-admitted clinical care.
Data Element Concept:	Emergency service stay—waiting time
Value Domain:	Total minutes NNNNN

Value domain attributes

Representational attributes

Representation class:	Total
Data type:	Number
Format:	NNNNN
Maximum character length:	5
Unit of measure:	Minute (m)

Data element attributes

Collection and usage attributes

Guide for use:	Calculated by subtracting the date and time the patient presents to the emergency service from the date and time the emergency service non-admitted clinical care commenced. Although **triage** category 1 is measured in seconds, it is recognised that the data will not be collected with this precision.
	This data element should not be completed for patients who have an Emergency service stay—episode end status, code N of 'Did not wait to be attended by a health care professional' or 'Registered, advised of another health care service, and left the emergency department without being attended by a health care professional'.
Comments:	It is recognised that at times of extreme urgency or multiple synchronous presentations, or if no medical officer is on duty in the emergency service, this service may be provided by a nurse.
