**Guide for use:** Emergency service clinical care can be commenced by a doctor, nurse, mental health practitioner or other health professional, when investigation, care and/or treatment is provided in accordance with an established clinical pathway defined by the emergency service. Placement of a patient in a cubicle and observations taken to monitor a patient pending a clinical decision regarding commencement of a clinical pathway, do not constitute commencement.

Patients with an [Emergency service stay—episode end status, code N](#) of 'Did not wait to be attended by a healthcare professional' or 'Registered, advised of another health care service, and left the emergency service without being attended by a health care professional' should not have a clinical care commencement date, because they left before investigation, care and/or treatment was commenced by a health professional in accordance with an established clinical pathway defined by the emergency service.

The following examples illustrate the commencement of emergency service clinical care.

### Example 1

- A patient presents at the emergency service with mild asthma. At [triage](#), the patient is categorised as category three and returns to the waiting area.
- The patient has a more severe asthma attack in the waiting area, is re-triaged to category two and shown to a cubicle where standard observations are taken.
- A nurse comes to the cubicle and commences treatment based on an

acknowledged clinical pathway of the emergency service. At this point: **emergency service clinical care has commenced.**

#### Example 2

- A patient presents at the emergency service in an agitated, delusional state. At triage, the patient is categorised as category two and placed in a cubicle and the mental health practitioner notified.
- Observations are taken and nursing staff continue to observe the patient.
- The mental health practitioner arrives, assesses the patient and develops a management plan. At this point: **emergency service clinical care has commenced.**

#### Example 3

- A patient presents at the emergency service with an ankle injury from football. At triage, the patient is categorised as category four and moved to the 'fast track area'.
- The physiotherapist attends, examines the patient, makes an assessment (including diagnostic imaging requirements) and determines a treatment plan. At this point: **emergency service clinical care has commenced.**

#### Example 4

- A patient presents at the emergency service with a sore arm, following a fall, with limited arm movement possible.
- The patient is categorised as category three at triage and placed in a cubicle.
- A nurse provides analgesia and assesses the patient, including ordering diagnostic imaging. At this point: **emergency service clinical care has commenced.**

#### Example 5

- A patient presents at the emergency service feeling vague and having been generally unwell for a day or two. The patient has a slight cough. At triage, the patient is categorised as category three.
- The patient is placed in a cubicle where standard observations are taken. Respiration is 26 bpm, blood pressure is 90/60 and the patient is hypoxic. The patient is given oxygen, and the treating clinician attends and provides instruction regarding patient care. At this point: **emergency service clinical care has commenced.**

#### Example 6

- A patient presents at the emergency service with chest pain. Triage category two is allocated. The patient is placed in a cubicle and a nurse gives oxygen and Anginine, takes blood samples and conducts an electrocardiogram (ECG). The ECG is reviewed. At this point: **emergency service clinical care has commenced.**
- A doctor subsequently arrives and the patient is transferred to the catheter lab after examination.

#### Example 7

- The emergency service is notified by ambulance that a patient is being transported having severe behavioural problems.
- The patient is taken to an appropriate cubicle and restrained.
- A clinician administers sedation and requests the attendance of a mental health practitioner. At this point: **emergency service clinical care has commenced.**

**Collection methods:** Collected in conjunction with [Emergency service stay—clinical care commencement time, hmmm](#).

**Conditional obligation:**

This data item is only required to be reported if the value for [Emergency service stay—episode end status, code N](#) is recorded as:

- Code 1 - Admitted to this hospital (either short stay unit, hospital-in-the-home or non-emergency service hospital ward);
- Code 2 - Non-admitted patient emergency service episode completed - departed without being admitted or referred to another hospital;
- Code 3 - Non-admitted patient emergency service episode completed - referred to another hospital for admission;
- Code 5 - Left at own risk after being attended by a health care professional but before the non-admitted patient emergency service episode was completed;
- Code 6 - Died in emergency service.
