Indigenous-specific primary health care: PI11a-Number of female Indigenous regular clients who gave birth within the previous 12 months, and who have a smoking status result within a specified category, June 2021

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: PI11a-Number of female Indigenous regular clients who gave birth within the

previous 12 months, and who have a smoking status result within a specified

category, June 2021

METEOR identifier: 747564

Registration status: <u>Indigenous</u>, Superseded 06/11/2022

Description: Number of female <u>Indigenous regular clientswho gave birth within the</u>

previous 12 months, and whose smoking status result recorded during

pregnancy was:

current smoker;ex-smoker; ornever smoked.

Rationale: Smoking during pregnancy is a risk factor for adverse events in pregnancy, and can

be associated with low birthweight, pre-term birth, fetal growth restriction, congenital abnormalities and perinatal death. Low birthweight infants are at a greater risk of dying during the first year of life and are prone to ill health in childhood. Smoking during pregnancy is also associated with increased risk of

spontaneous abortion and ectopic pregnancy.

Indicator set: Indigenous-specific primary health care national key performance indicators June

<u>2021</u>

Indigenous, Superseded 06/11/2022

Collection and usage attributes

Computation description: Count of female <u>Indigenous regular clients</u> who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was:

- · current smoker;
- · ex-smoker; or
- never smoked.

Presented as a number.

Calculated separately for each smoking status.

Birth: includes live births and still births if the birthweight was at least 400 grams or the gestational age was 20 weeks or more.

Operationalisation of smoking status: include only the most recent smoking status recorded prior to the completion of the latest pregnancy. Where an Indigenous regular client's tobacco smoking status does not have an assessment date assigned within the Client Information System (CIS), smoking status should not be

counted.

Include: results arising from measurements conducted outside of the organisation that are known by the organisation.

Computation: Numerator only.

Numerator: Calculation A: Number of female Indigenous regular clients who gave birth within

the previous 12 months, and whose smoking status result recorded during

pregnancy was 'current smoker'.

Calculation B: Number of female Indigenous regular clients who gave birth within the previous 12 months, and whose smoking status result recorded during

pregnancy was 'ex-smoker'.

Calculation C: Number of female Indigenous regular clients who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was 'never smoked'.

Numerator data elements:

-Data Element / Data Set-

Person—tobacco smoking status, code N

Data Source

Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators (nKPI) data collection
