Sexual orientation

Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 755634

Registration status: [Health](#), Qualified 03/06/2022

Definition: Sexual orientation encapsulates how a person thinks of their own sexuality and the terms they identify with. Their sexual orientation reflects their romantic and sexual attraction to others, to persons of the same [sex](#), or to persons of a different sex. Some of the main ways of identification are: heterosexual (straight), gay, lesbian, or bisexual.

Collection and usage attributes

Comments: The following definitions are based on the ABS Standard for Sex, Gender, Variations of Sex Characteristics and Sexual Orientation Variables (ABS 2021):

Nominal definition

Sexual orientation is an umbrella concept that encapsulates:

- sexual identity (how a person thinks of their sexuality and the terms they identify with)
- attraction (romantic or sexual interest in another person)
- behaviour (sexual behaviour).

Responses to a sexual orientation question are a subjective view of oneself and can change over the course of a person's lifetime and in different contexts. An individual could respond differently to questions on either sexual identity, attraction or behaviour.

Operational definition

Questions about a person's sexual orientation would usually relate to their sexual identity and attraction, i.e. how a person thinks of their own sexuality, the terms they identify with and their romantic or sexual attraction to others. To gather data on sexual behaviour, a series of more detailed questions and answer categories may be more appropriate.
