National Core Maternity Indicators, 2022

Identifying and definitional attributes

Metadata item type: Indicator Set

Indicator set type: Other

METEOR identifier: 758123

Registration status: [Health](#), Superseded 14/07/2023

Description: The Maternity Services Inter-Jurisdictional Committee of the Australian Health Ministers' Advisory Council was tasked with developing a set of national core maternity indicators to monitor the quality of maternity care in Australia. This work was undertaken by the Australian Institute of Health and Welfare (AIHW), after initial development by Women's Healthcare Australasia (WHA) and the Western Australian Department of Health.

The indicators are clinical indicators that apply to the field of maternity care. A clinical indicator is specifically defined as a measure of the clinical management and outcome of care, and should be based on evidence that confirms the underlying causal relationship between a particular process or intervention and health outcome (WHA 2007).

Clinical indicators have a key role in the assessment, monitoring and evaluation of patient care. They allow for monitoring of change in practice and outcomes relative to individual and peer organisations over time with the objective of improving patient care.

Collection and usage attributes

Comments:

NOTE: Not all of the data used to derive these indicators are collected in a standardised way, or are available for all years across all jurisdictions; therefore, results should be interpreted with caution.

Data for 2022 indicator reporting include annual data for the calendar years 2004 to 2020.

- Perinatal NMDS (metadata for earlier years),
- Perinatal NMDS (2007-2008, 2008-2010, 2010-2011, 2011-12, 2012-13, 2013-14, 2014-18, 2018-19, 2019-20)
- Perinatal NMDS 2020-21 (for the first six months of the collection).

Data are not available for all indicators for all years.

For reporting purposes, the terms 'females' and 'women' are used interchangeably.
