Indigenous-specific primary health care: PI11b-Proportion of female Indigenous regular clients who gave birth within the previous 12 months, and who have a smoking status result within a specified category, December 2021

# Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

**Short name:** PI11b-Proportion of female Indigenous regular clients who gave birth within the

previous 12 months, and who have a smoking status result within a specified

category, December 2021

METEOR identifier: 762565

Registration status: <u>Indigenous</u>, Superseded 12/06/2023

**Description:** Proportion of female <u>Indigenous regular clients</u> who gave birth within the

previous 12 months, and whose smoking status result recorded during pregnancy

was:

current smoker;ex-smoker; ornever smoked.

Rationale: Smoking during pregnancy is a risk factor for adverse events in pregnancy, and can

be associated with low birthweight, pre-term birth, fetal growth restriction, congenital abnormalities and perinatal death. Low birthweight infants are at a greater risk of dying during the first year of life and are prone to ill health in childhood. Smoking during pregnancy is also associated with increased risk of

spontaneous abortion and ectopic pregnancy.

# Collection and usage attributes

#### Computation description:

Proportion of female <u>Indigenous regular clients</u> who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was:

- · current smoker;
- · ex-smoker; or
- never smoked.

Presented as a percentage.

Calculated separately for each smoking status.

Birth: includes live births and still births if the birthweight was at least 400 grams or the gestational age was 20 weeks or more.

Operationalisation of smoking status: include only the most recent smoking status recorded prior to the completion of the latest pregnancy. Where an Indigenous regular client's tobacco smoking status does not have an assessment date assigned within the Client Information System (CIS), smoking status should not be counted.

Include: results arising from measurements conducted outside of the organisation that are known by the organisation.

Computation:

(Numerator ÷ Denominator) x 100

**Numerator:** 

Calculation A: Number of female Indigenous regular clients who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was 'current smoker'.

Calculation B: Number of female Indigenous regular clients who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was 'ex-smoker'.

Calculation C: Number of female Indigenous regular clients who gave birth within the previous 12 months, and whose smoking status result recorded during pregnancy was 'never smoked'.

#### Numerator data elements:

#### Data Element / Data Set-

Person—tobacco smoking status, code N

## Data Source

Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators (nKPI) data collection

#### NMDS / DSS

Indigenous-specific primary health care NBEDS December 2021

#### Guide for use

'Daily smoker', 'weekly smoker' and 'irregular smoker' are aggregated into 'current smoker'.
