Indigenous-specific primary health care: PI12a- Number of Indigenous regular clients who have a BMI result within a specified category, June 2022

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	PI12a-Number of Indigenous regular clients who have a BMI result within a specified category, June 2022
METEOR identifier:	772314
Registration status:	Indigenous , Superseded 27/08/2023
Description:	<p>Number of Indigenous regular clients aged 18 and over who had their body mass index (BMI) classified as:</p> <ul style="list-style-type: none">• underweight (<18.50)• normal (18.50–24.99)• overweight (25.00–29.99)• obese (≥30.00)• not calculated <p>within the previous 24 months.</p>
Rationale:	Excess weight, especially obesity, is a major risk factor for developing chronic disease. As the level of excess weight increases, so does the risk of developing these conditions. In addition, being overweight or obese can hamper the ability to control or manage chronic diseases.
Indicator set:	Indigenous-specific primary health care national key performance indicators June 2022 Indigenous , Superseded 27/08/2023

Collection and usage attributes

Population group age from:	18 years and over.
-----------------------------------	--------------------

Computation description: Number of Indigenous regular clients aged 18 and over who had their BMI classified as:

- underweight (<18.50)
- normal (18.50–24.99)
- overweight (25.00–29.99)
- obese (≥30.00)
- not calculated

within the previous 24 months.

Presented as a number.

Calculated separately for each BMI classification.

BMI: A measure of an adult's weight (body mass) relative to height used to assess the extent of weight deficit or excess where height and weight have been measured. BMI is the weight in kilograms divided by the square of the height in metres (WHO 2017).

If the client had their BMI recorded more than once within the previous 24 months, include only the most recently recorded result.

Only include clients whose BMI was classified using a height measurement taken since the client turned 18 and a weight measurement taken within the previous 24 months.

BMI cannot be calculated if components necessary for its calculation (weight or height) are unknown or have not been collected.

BMI not calculated: includes clients with neither height nor weight recorded, as well as those with invalid height and/or weight recorded.

Computation:

Numerator only.

Numerator:

Calculation A: Number of Indigenous regular clients aged 18 and over who had their BMI classified as underweight within the previous 24 months.

Calculation B: Number of Indigenous regular clients aged 18 and over who had their BMI classified as normal weight within the previous 24 months.

Calculation C: Number of Indigenous regular clients aged 18 and over who had their BMI classified as overweight within the previous 24 months.

Calculation D: Number of Indigenous regular clients aged 18 and over who had their BMI classified as obese within the previous 24 months.

Calculation E: Number of Indigenous regular clients aged 18 and over who did not have their BMI calculated within the previous 24 months.

Numerator data elements:

Data Element / Data Set

[Person—body mass index \(classification\), code N{,N}](#)

Data Source

[Aboriginal and Torres Strait Islander specific primary health care national Key Performance Indicators \(nKPI\) data collection](#)

NMDS / DSS

[Indigenous-specific primary health care NBEDS June 2022](#)

Guide for use

Only include the underweight, normal, overweight, obese and not stated/inadequately described classifications.

Only include those client's whose BMI was classified using a height measurement taken since the client turned 18 and a weight measurement taken within the previous 24 months.

Data Element / Data Set
