Indigenous-specific primary health care: PI14a-Number of Indigenous regular clients aged 6 months and over who are immunised against influenza, June 2022

Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Output measure

Short name: PI14a-Number of Indigenous regular clients aged 6 months and over who are

immunised against influenza, June 2022

METEOR identifier: 772322

Registration status: Indigenous, Superseded 27/08/2023

Description: Number of <u>Indigenous regular clients</u> aged 6 months and over who received an

influenza vaccine within the previous 12 months.

Rationale: Influenza is the most common vaccine-preventable disease in Australia. Although it

can be a mild disease, it can also cause very serious illness in otherwise healthy people. It can require hospitalisation and can cause death. Rates of influenza are

higher among Indigenous Australians than non-Indigenous Australians.

Indicator set: Indigenous-specific primary health care national key performance indicators June

<u>2022</u>

Indigenous, Superseded 27/08/2023

Collection and usage attributes

Population group age

from:

6 months.

Population group age to: 65 years and over.

Computation description: Count of Indigenous regular clients aged 6 months and over who received an

influenza vaccine within the previous 12 months.

Presented as a number.

Computation: Numerator only.

Numerator: Number of Indigenous regular clients aged 6 months and over who received an

influenza vaccine within the previous 12 months.

Numerator data elements: Data Element / Data Set
