Person with cancer—region of first recurrence as locoregional cancer, topography code (ICD-O-3.1) ANN.N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Region of first recurrence as locoregional cancer
METEOR identifier:	775185
Registration status:	Health , Qualified 03/08/2023
Definition:	The region of first recurrence as locoregional cancer in a person with cancer, after a disease-free period, as represented by an ICD-O-3.1 code.
Data Element Concept:	Person with cancer—region of first recurrence as locoregional cancer
Value Domain:	Topography code (ICD-O-3.1) ANN.N

Value domain attributes

Representational attributes

Classification scheme:	International Classification of Diseases for Oncology 3rd edition, 1st revision
Representation class:	Code
Data type:	String
Format:	ANN.N
Maximum character length:	5

Collection and usage attributes

Guide for use:	Record all four alphanumeric characters of the topography code. The number after the decimal point represents the subsite or subcategory.

Data element attributes

Collection and usage attributes

Guide for use:	<p>This information is collected for the site or region of the first recurrence as locoregional cancer.</p> <p>The term recurrence refers to the return, reappearance or metastasis of cancer of the same histology after a disease-free period.</p> <p>Locoregional recurrence refers to the appearance of cancer cells at the same site as the original (primary) tumour or the regional lymph nodes. A list of those lymph nodes defined as regional lymph nodes for each cancer site can be found in the TNM Classification of Malignant Tumours International Union Against Cancer (UICC) and the American Joint Committee on Cancer (AJCC) Cancer Staging Manual; the latest editions are recommended.</p> <p>Site or region refers to the anatomical position that the cancer has reappeared, record all relevant locoregional sites.</p> <p>The region of recurrence of distant metastasis is collected as a separate item.</p> <p>The record should not be updated with subsequent recurrences.</p>
Collection methods:	The information should be obtained from the patient's medical record.
Comments:	This is collected to identify in which anatomical structures recurrence occurs, and is useful for evaluating patterns of care and patient outcomes.
