Indigenous-specific primary health care: PI14a- Number of Indigenous regular clients aged 6 months and over who are immunised against influenza, December 2022

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Output measure
Short name:	PI14a-Number of Indigenous regular clients aged 6 months and over who are immunised against influenza, December 2022
METEOR identifier:	779083
Registration status:	Indigenous , Superseded 18/12/2023
Description:	Number of Indigenous regular clients aged 6 months and over who received an influenza vaccine within the previous 12 months.
Rationale:	Influenza is the most common vaccine-preventable disease in Australia. Although it can be a mild disease, it can also cause very serious illness in otherwise healthy people. It can require hospitalisation and can cause death. Rates of influenza are higher among Indigenous Australians than non-Indigenous Australians.
Indicator set:	Indigenous-specific primary health care national key performance indicators December 2022 Indigenous , Superseded 18/12/2023

Collection and usage attributes

Population group age from:	6 months.
Population group age to:	65 years and over.
Computation description:	Count of Indigenous regular clients aged 6 months and over who received an influenza vaccine within the previous 12 months. Presented as a number.
Computation:	Numerator only.
Numerator:	Number of Indigenous regular clients aged 6 months and over who received an influenza vaccine within the previous 12 months.
Numerator data elements:
