# Indigenous-specific primary health care: PI18a- Number of Indigenous regular clients with a selected chronic disease who have a kidney function test result recorded, June 2023

## Identifying and definitional attributes

<b>Metadata item type:</b>	Indicator
<b>Indicator type:</b>	Output measure
<b>Short name:</b>	PI18a-Number of Indigenous regular clients with a selected chronic disease who have a kidney function test result recorded, June 2023
<b>METEOR identifier:</b>	782705
<b>Registration status:</b>	<a href="#">Indigenous</a> , Superseded 25/02/2024
<b>Description:</b>	Number of <a href="#">Indigenous regular clients</a> aged 18 and over with a selected chronic disease who had a specified kidney function test recorded.
<b>Indicator set:</b>	<a href="#">Indigenous-specific primary health care national key performance indicators June 2023</a> <a href="#">Indigenous</a> , Superseded 25/02/2024

## Collection and usage attributes

**Computation description:** Number of Indigenous regular clients aged 18 and over with:

- type 2 diabetes
- cardiovascular disease (CVD)
- type 2 diabetes AND/OR CVD

who had:

- both an estimated glomerular filtration rate (eGFR) AND an albumin/creatinine ratio (ACR) test result recorded
- only an eGFR test result recorded
- only an ACR test result recorded
- neither an eGFR NOR an ACR test result recorded

within the previous 12 months.

Presented as a number.

Calculated separately for the specified chronic disease and test recorded categories.

Type 2 diabetes AND/OR CVD includes clients with:

- type 2 diabetes only
- CVD only
- type 2 diabetes and CVD.

Count clients with either or both of these conditions once only. For example, count a client with both type 2 diabetes and CVD once, not twice.

Test result recorded: to count a test as recorded, a valid test result must be entered in the test result field of the Clinical Information System (CIS). A valid test result is a numeric value that can be used to classify test results into the risk categories specified in the relevant national guidelines (see Kidney Health Australia 2020 for risk categories; see also PI19). Negative, non-numerical and null values are not considered to be valid results (that is, are invalid). Records with an invalid result recorded should be assigned to either the 'only an eGFR test result recorded', 'only an ACR test result recorded' or 'neither an eGFR nor an ACR test result recorded' as appropriate. It is acknowledged that inclusion of only valid test results may undercount the number of tests that were conducted, for example, because of known issues with pathology recording and uploading.

Test result recorded categories consist of:

- Both an eGFR AND an ACR test result recorded: a valid eGFR result recorded AND a valid ACR result recorded.
- Only an eGFR test result recorded: a valid eGFR result recorded AND a valid ACR result *not* recorded.
- Only an ACR test result recorded: a valid ACR result recorded AND a valid eGFR result *not* recorded.
- Neither an eGFR nor an ACR test result recorded: a valid eGFR result *not* recorded AND a valid ACR *not* recorded.

**Computation:** Numerator only.

**Numerator:**

Calculation A: Number of Indigenous regular clients aged 18 and over with type 2 diabetes who had both an eGFR AND an ACR test result recorded within the previous 12 months.

Calculation B: Number of Indigenous regular clients aged 18 and over with type 2 diabetes who had only an eGFR test result recorded within the previous 12 months.

Calculation C: Number of Indigenous regular clients aged 18 and over with type 2 diabetes who had only an ACR test result recorded within the previous 12 months.

Calculation D: Number of Indigenous regular clients aged 18 and over with type 2 diabetes who had neither an eGFR NOR an ACR test result recorded within the previous 12 months.

Calculation E: Number of Indigenous regular clients aged 18 and over with CVD who had both an eGFR AND an ACR test result recorded within the previous 12 months.

Calculation F: Number of Indigenous regular clients aged 18 and over with CVD who had only an eGFR test result recorded within the previous 12 months.

Calculation G: Number of Indigenous regular clients aged 18 and over with CVD who had only an ACR test result recorded within the previous 12 months.

Calculation H: Number of Indigenous regular clients aged 18 and over with CVD who had neither an eGFR NOR an ACR test result recorded within the previous 12 months.

Calculation I: Number of Indigenous regular clients aged 18 and over with type 2 diabetes AND/OR CVD who had both an eGFR AND an ACR test result recorded within the previous 12 months.

Calculation J: Number of Indigenous regular clients aged 18 and over with type 2 diabetes AND/OR CVD who had only an eGFR test result recorded within the previous 12 months.

Calculation K: Number of Indigenous regular clients aged 18 and over with type 2 diabetes AND/OR CVD who had only an ACR test result recorded within the previous 12 months.

Calculation L: Number of Indigenous regular clients aged 18 and over with type 2 diabetes AND/OR CVD who had neither an eGFR NOR an ACR test result recorded within the previous 12 months.
