Australian Emergency Care Classification version 12.0

Exported from METEOR (AIHW's Metadata Online Registry)

Australian Emergency Care Classification version 12.0

Identifying and definitional attributes

Metadata item type:	Classification Scheme
Synonymous names:	AR-DRG v 11.0
METEOR identifier:	785752
Registration status:	Tasmanian Health, Standard 13/11/2023
Definition:	The Independant Hospital and Aged Care Pricing Authority classification for the reasons for emergency department presentations and complexity of episodes of care.

Collection and usage attributes

Comments:	The AECC was developed to overcome limitations of classifications systems used for activity based funding in Australia. It was developed using a combination of statistical analysis and clinical input.
	The AECC uses variables that are currently reported through national minimum data sets. It has also been designed so that improved measures of complexity can be introduced as they become available.
