Implementation in Data Set Specifications:

National Preschool Attendance Collection DSS 2024 Early Childhood, Recorded 16/05/2024

DSS specific information:

In the National Preschool Attendance Collection, this item is used to record the child's preschool program enrolment start date for the year (not the start date of the program or the first day of term), even in instances where the child starts half way through the term.

In instances where the child's preschool program start date for the year is not available, record the child's preschool program enrolment start date for the attendance reference period.

In instances where a child is enrolled for a week(s), then un-enrols for a week(s), and then re-enrols, each enrolment period start and end date should be provided as separate records of enrolment for the child.

In instances where the jurisdiction can provide the month and year of the start date but cannot provide the day, the day should be set to '00' (i.e. 00052024).

In instances where only year is available, and day and month of start date is unavailable, only year should be supplied, with both day and month components set to '00' (i.e. 00002024).

The jurisdiction should clearly indicate in supporting documentation, any estimated or imputed start dates.
