Identifying and definitional attributes

Metadata item type: Data Set Specification
METeOR identifier: 273042
Registration status: Health, Superseded 07/12/2005
DSS type: National Minimum Data Set (NMDS)
Scope: The scope of this minimum data set is patients on waiting lists for elective surgery (as defined in the Waiting list category data element) which are managed by public acute hospitals. This will include private patients treated in public hospitals, and may include public patients treated in private hospitals.

Hospitals may also collect information for other care (as defined in the Waiting list category data element), but this is not part of the National Minimum Data Set (NMDS) for Elective surgery waiting times.

Patients on waiting lists managed by hospitals operated by the Australian Defence Force, corrections authorities and Australia's external territories are not currently included.

Census data: Data are collected for patients on elective surgery waiting lists who are yet to be admitted to hospital or removed for another reason. The scope is patients on elective surgery waiting lists on a census date who are 'ready for care' as defined in the Elective surgery waiting list episode—patient listing status, readiness for care code N data element.

Collection and usage attributes

Statistical unit: Patients on waiting lists on census dates.
Collection methods: Elective care waiting list episode—category reassignment date, DDMMYYYY is not required for reporting to the NMDS, but is necessary for the derivation of Elective surgery waiting list episode—waiting time (at a census date), total days N[NNN]. Elective care waiting list episode—elective care type, code N and Elective surgery waiting list episode—patient listing status, readiness for care code N are not required for reporting to the NMDS, but are necessary for determining whether patients are in scope for the NMDS. These data elements should be collected at the local level and reported to state and territory health authorities as required.

National reporting arrangements

State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on an annual basis.

Periods for which data are collected and nationally collated

Implementation start date: 30/09/2002
Implementation end date: 30/06/2006
Comments: There are two different types of data collected for this national minimum data set (census data and removals data) and the scope and list of data elements associated with each is different.

For the purposes of this NMDS, public hospitals include hospitals which are set up to provide services for public patients (as public hospitals do), but which are managed privately.
The inclusion of public patients removed from elective surgery waiting lists managed by private hospitals will be investigated in the future.

Collection and usage attributes

**Guide for use:**

For elective surgery, the listing date is the date on which the patient is added to an elective surgery waiting list.

The acceptance of the notification by the hospital or community health service is conditional upon the provision of adequate information about the patient and the appropriateness of the patient referral.

**Comments:**

The hospital or community health service should only accept a patient onto the waiting list when sufficient information has been provided to fulfil state/territory, local and national reporting requirements.

Implementation in Data Set Specifications:

Tasmanian Elective Surgery Waiting List Data Set - 2016 Tasmanian Health, Endorsed 19/12/2016
Elective surgery waiting list episode—clinical urgency, code N

Identifying and definitional attributes

**Short name:** Clinical urgency  
**METeOR identifier:** 270008  
**Registration status:** Health, Superseded 12/06/2015  
Tasmanian Health, Draft 13/09/2012  
National Health Performance Authority (retired), Retired 01/07/2016  

**Definition:** A clinical assessment of the urgency with which a patient requires elective hospital care, as represented by a code.

Data element concept attributes

Identifying and definitional attributes

**Data element concept:** Elective surgery waiting list episode—clinical urgency  
**METeOR identifier:** 269481  
**Registration status:** Health, Superseded 12/06/2015  
National Health Performance Authority (retired), Retired 01/07/2016  

**Definition:** A clinical assessment of the urgency with which a patient requires elective hospital care.

**Context:** Elective surgery: Categorisation of waiting list patients by clinical urgency assists hospital management and clinicians in the prioritisation of their workloads. It gives health consumers a reasonable estimate of the maximum time they should expect to wait for care. Clinical urgency classification allows a meaningful measure of system performance to be calculated, namely the number or proportion of patients who wait for times in excess of the maximum desirable time limit for their urgency category (metadata item the overdue patient status).

**Object class:** Elective surgery waiting list episode  
**Property:** Clinical urgency

Value domain attributes

Identifying and definitional attributes

Elective surgery waiting list episode—clinical urgency, code N  
Page 5 of 24
Admission at some time in the future acceptable for a condition causing minimal or no pain, dysfunction or disability, which is unlikely to deteriorate quickly and which does not have the potential to become an emergency.

**Data element attributes**

**Collection and usage attributes**

**Guide for use:**

The classification employs a system of urgency categorisation based on factors such as the degree of pain, dysfunction and disability caused by the condition and its potential to deteriorate quickly into an emergency. All patients ready for care must be assigned to one of the urgency categories, regardless of how long it is estimated they will need to wait for surgery.

**Comments:**

A patient's classification may change if he or she undergoes clinical review during the waiting period. The need for clinical review varies with the patient's condition and is therefore at the discretion of the treating clinician. The waiting list information system should be able to record dates when the classification is changed (metadata item Elective care waiting list episode—category reassignment date, DDMMYYYY).

Elective surgery waiting list episode—extended wait patient indicator, code N

Identifying and definitional attributes

Short name: Extended wait patient
METeOR identifier: 269964
Registration status: Health, Standard 01/03/2005
Definition: Whether a patient is an extended wait patient, as represented by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept: Elective surgery waiting list episode—extended wait patient indicator
METeOR identifier: 269479
Registration status: Health, Standard 01/03/2005
Definition: A patient with the lowest level of clinical urgency for an awaited procedure who has been on the waiting list for elective surgery for more than one year.
Context: Elective surgery:
The numbers and proportions of patients with extended waits are measures of hospital performance in relation to patient access to elective hospital care.
Object class: Elective surgery waiting list episode
Property: Extended wait patient indicator

Value domain attributes

Identifying and definitional attributes

Value domain: Extended wait patient indicator code N
METeOR identifier: 270633
Registration status: Health, Standard 01/03/2005
Definition: A code set representing the extended waiting status of a patient.

Representational attributes

Representation class: Code
Data type: Number
Format: N

<td>1</td>
<td>Extended wait patient</td>
</tr>
<tr>
<td>2</td>
<td>Other patient</td>
</tr>
</tbody>
</table>

Data element attributes

Collection and usage attributes

Guide for use:
A patient is classified as an extended wait patient if the patient is in clinical urgency category 3 at the time of admission or at a census time and has been waiting for the elective surgery for more than one year.

Comments:
This metadata item is used to identify clinical urgency category 3 patients who had waited longer than one year at admission or have waited longer than one year at the time of a census. An extended wait patient is not an overdue patient as there is no maximum desirable waiting time specified for patients in clinical urgency category 3 as they have been assessed as not having a clinically urgent need for the awaited procedure.

**Data element attributes**

**Collection and usage attributes**

**Guide for use:**

The procedure terms are defined by the ICD-10-AM (3rd edition) codes which are listed in comments below. Where a patient is awaiting more than one indicator procedure, all codes should be listed. This is because the intention is to count procedures rather than patients in this instance.

These are planned procedures for the waiting list, not what is actually performed during hospitalisation.

**Comments:**

The list of indicator procedures may be reviewed from time to time. Some health authorities already code a larger number of waiting list procedures.

Waiting list statistics for indicator procedures give a specific indication of performance in particular areas of elective care provision. It is not always possible to code all elective surgery procedures at the time of addition to the waiting list. Reasons for this include that the surgeon may be uncertain of the exact procedure to be performed, and that the large number of procedures possible and lack of consistent nomenclature would make coding errors likely. Furthermore, the increase in workload for clerical staff may not be acceptable. However, a relatively small number of procedures account for the bulk of the elective surgery workload. Therefore, a list of common procedures with a tendency to long waiting times is useful. Waiting time statistics by procedure are useful to patients and referring doctors. In addition, waiting time data by procedure assists in planning and resource allocation, audit and performance monitoring.

The following is a list of ICD-10-AM (3rd edition) codes, for the indicator procedures:

**Cataract extraction:**

**Cholecystectomy:**

**Coronary Artery bypass graft:**

**Data element attributes**

**Collection and usage attributes**

**Guide for use:**  
This metadata item is only required for patients in Elective surgery waiting list episode—clinical urgency, code N categories with specified maximum desirable waiting times. Overdue patients are those for whom the hospital system has failed to provide timely care and whose wait may have an adverse effect on the outcome of their care. They are identified by a comparison of Elective surgery waiting list episode—waiting time (at removal), total days N[NNN] or Elective surgery waiting list episode —waiting time (at a census date), total days N[NNN] and the maximum desirable time limit for the Elective surgery waiting list episode—clinical urgency, code N classification.
A patient is classified as overdue if ready for care and waiting time at admission or waiting time at a census date is longer than 30 days for patients in Elective surgery waiting list episode—clinical urgency, code N category 1 or 90 days for patients in Elective surgery waiting list episode—clinical urgency, code N category 2.

Comments:
This metadata item is not used for patients in Elective surgery waiting list episode—clinical urgency, code N category 3 as there is no specified timeframe within which it is desirable that they are admitted. The metadata item Elective surgery waiting list episode—extended wait patient indicator, status code N identifies patients in Elective surgery waiting list episode—clinical urgency, code N category 3 who have waited longer than one year at admission or at the time of a census.

Collection and usage attributes

Comments: The above classifications are consistent with the Recommended Medical Specialties and Qualifications agreed by the National Specialist Qualification Advisory Committee of Australia, September 1993. Vascular surgery is a subspecialty of general surgery. The Royal Australian College of Surgeons has a training program for vascular surgeons. The specialties listed above refer to the surgical component of these specialties - ear, nose and throat surgery refers to the surgical component of the specialty otolaryngology; gynaecology refers to the gynaecological surgical component of obstetrics and gynaecology; ophthalmology refers to the surgical component of the specialty (patients awaiting argon laser phototherpay are not included).

Definition: Total number of days.

Representational attributes

Representation class: Total
Data type: Number
Format: N[NNN]
Maximum character length: 4
Unit of measure: Day

Data element attributes

Collection and usage attributes

Guide for use: The number of days is calculated by subtracting the Elective care waiting list episode—listing date for care, DDMMYYYY from the Hospital census (of elective surgery waitlist patients)—census date, DDMMYYYY, minus any days when the patient was 'not ready for care', and also minus any days the patient was waiting with a less urgent clinical urgency category than their clinical urgency category at the census date.

Days when the patient was not ready for care is calculated by subtracting the date(s) the person was recorded as 'not ready for care' from the date(s) the person was subsequently recorded as again being 'ready for care'.

Elective surgery waiting list episode—waiting time (at a census date), total days N[NNN]
If, at any time since being added to the waiting list for the elective surgical procedure, the patient has had a less urgent clinical urgency category than the category at the census date, then the number of days waited at the less urgent Elective surgery waiting list episode—clinical urgency, code N category should be subtracted from the total number of days waited.

In cases where there has been only one category reassignment (i.e. to the more urgent category attached to the patient at census date) the number of days at the less urgent clinical urgency category should be calculated by subtracting the Elective care waiting list episode—listing date for care, DDMMYYYYY from the Elective care waiting list episode—category reassignment date, DDMMYYYYY. If the patient's clinical urgency was reclassified more than once, days spent in each period of less urgent clinical urgency than the one applying at the census date should be calculated by subtracting one Elective care waiting list episode—category reassignment date, DDMMYYYYY from the subsequent Elective care waiting list episode—category reassignment date, DDMMYYYYY, and then adding the days together.

When a patient is admitted from an elective surgery waiting list but the surgery is cancelled and the patient remains on or is placed back on the waiting list within the same hospital, the time waited on the list should continue. Therefore at the census date the patient's waiting time includes the number of days waited on an elective surgery waiting list, both before and after any cancelled surgery admission. The time waited before the cancelled surgery should be counted as part of the total time waited by the patient.

**Comments:**

Elective surgery waiting times data collections include measures of waiting times at removal and at designated census dates. This metadata item is used to measure waiting times at a designated census date whereas the metadata item Elective surgery waiting list episode—waiting time (at removal), total days N[NNN] measures waiting times at removal.

The calculation of waiting times for patients who are transferred from an elective surgery waiting list managed by one public acute hospital to another will be investigated in the future. In this case, the amount of time waited on previous lists should follow the patient to the next. Therefore at the census date, their waiting time includes the total number of days on all lists (less days not ready for care and days in lower urgency categories).

This is a critical elective surgery waiting times metadata item. It is used to determine whether patients are overdue, or had extended waits at a census date. It is used to assist doctors and patients in making decisions about hospital referral, to assist in the planning and management of hospitals and in health care related research.
